Bricks

A LEGO® BRICK MODEL OF

Guardian

The six-legged ancient machine, with one blue eye and legs you can pose, in 183 pieces.

183 pieces · 37 steps · 5 sections

Unofficial fan-made building instructions

Not physically build-tested. Every part is a real LEGO element and the model was checked on a computer (connections, collisions, every step, balance, mechanism), but nobody has built it with real bricks yet.

Not produced, sponsored or endorsed by the LEGO Group. LEGO® is a trademark of the LEGO Group. Guardian and related names belong to their owners. Made with brickkit · 2026-10-14

Before you start

An unofficial fan-made manual

This booklet is not a LEGO product. It was generated from the model file by a computer program and checked part by part.

Not physically build-tested

The model and these steps were checked on a computer only: every part/colour is a real LEGO element, all 396 connections between parts were matched in 3D, no two parts overlap, every part can be pushed into place in its step, and the model's balance was estimated; the mechanism was swept through its whole range. Not tested: how firmly parts hold, part tolerances and how it copes with handling. Take your time and support the model while you work.

The finished model

About 26.1 × 22.4 cm and 13.7 cm tall, about 122 g (estimated).

It goes together in sections. Make six sockets and six legs first: a leg is a chain of five ball-jointed links and a claw. Build the round body with the sockets in the band between its two rims, stand it on the black stand, snap a leg into each socket and press the head onto the neck.

You will need

- The 183 pieces in 10 colours listed at the back, with their LEGO element IDs and BrickLink numbers.
- A brick separator for pieces that sit too deep for a finger.

Tips

- Sort the pieces by colour before you start.
- Build the sections in order: each sub-assembly is finished before it is used.
- New pieces in a step have a yellow outline; earlier pieces are drawn paler.
- The legs are on friction ball joints and can be posed. The stand carries the body: if a leg lifts off the table or pushes the body up, bend it at a joint or two.
- A ball snaps into its socket with a firm push, straight in. Hold the socket's plate, not the leg beyond it.

The 10 colours

- Dark Bluish Gray: 55
- Black: 49
- White: 42
- Magenta: 17
- Tan: 9
- Light Bluish Gray: 4
- Trans-Dark Pink: 3
- Dark Pink: 2
- Dark Tan: 1
- Trans-Light Blue: 1

How to read the steps

Parts and step number

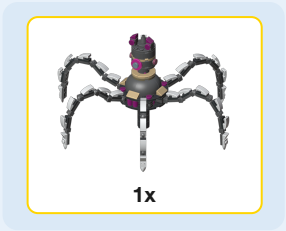

The parts for the step and how many of each, then the step number. The parts of a step are drawn at one scale, so a longer one looks longer; a tile or a long plate also has its size in studs under it.

New parts

The parts added in a step have a yellow outline and are drawn in full colour; the parts from earlier steps are drawn paler.

Sub-assemblies

A yellow-framed picture means: put in the sub-assembly you built in its own section. "Build 4x" means you need four of them.

Sections

Each section starts with its name at the top of the page. Sections are built in the order they appear.

Seen from below

When a step adds parts underneath, the picture shows the model from below. A small label says so (and "seen from behind" likewise). A piece the picture cannot show gets a small picture beside it, ringed in yellow, from the side it can be seen from: where it clicks in.

Insert direction

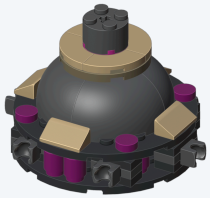

Some parts slide in sideways (axles through bearings, gears onto axles). The picture shows where they end up; push them in along their axle.

Build overview

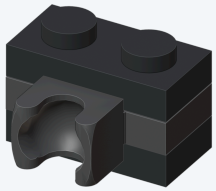

The model is built in 5 sections. Each is finished before it is used.

LEG · BUILD 6X

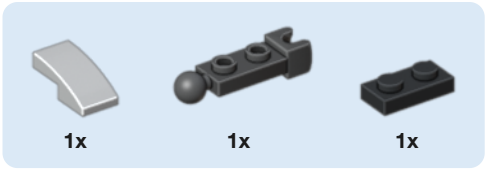

17

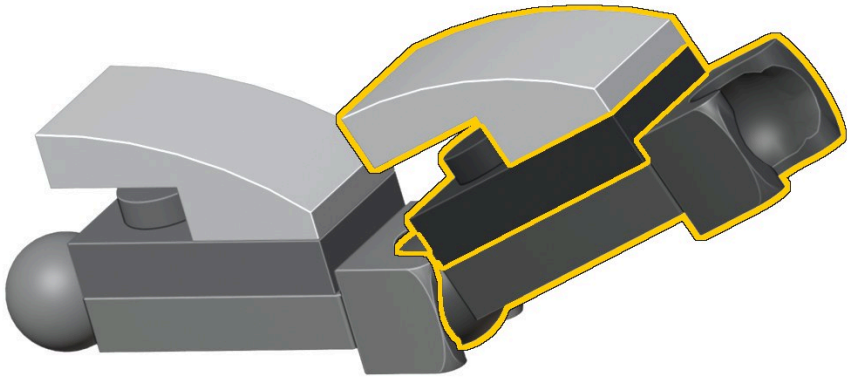

A leg: the first link, a plate with a ball at one end and a socket at the other. On it a black 1 x 2 plate, and on that a white curved slope, its thick end at the ball. Make six legs

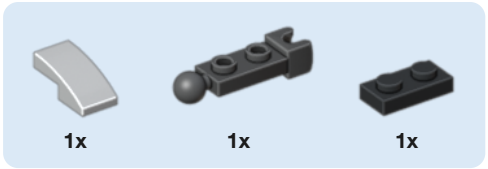

18

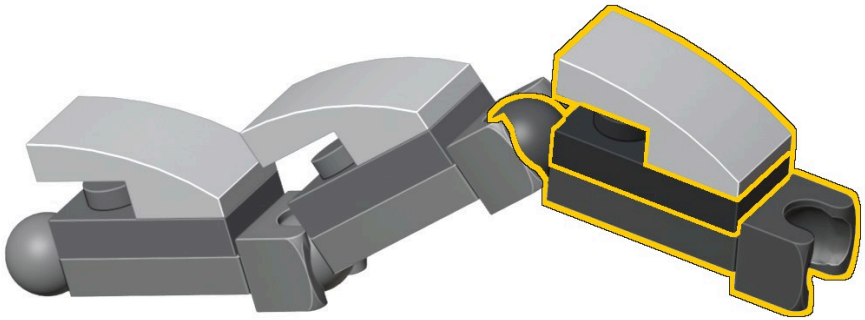

Snap the second link's ball into the first one's socket, bent up, and cover it the same way

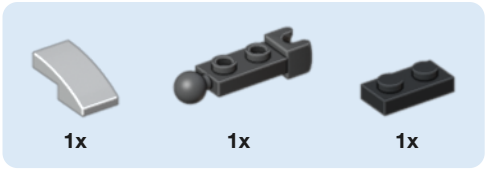

19

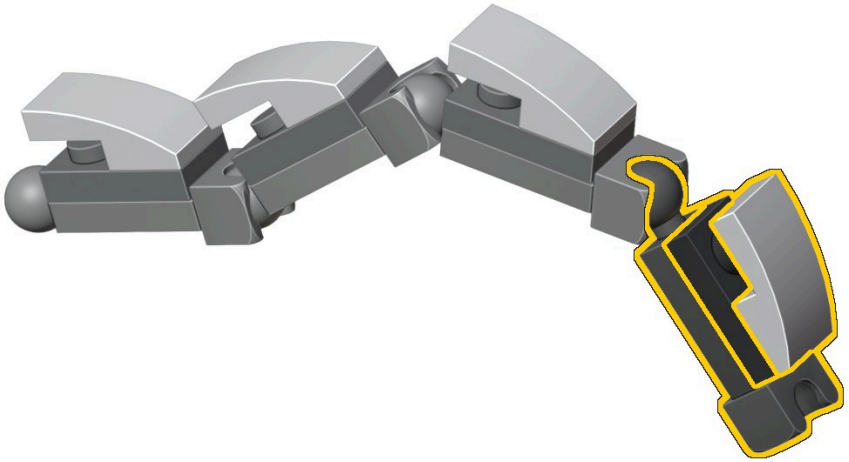

The third link, level: the top of the arch

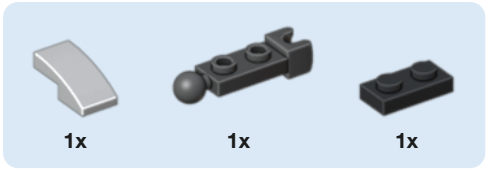

20

The fourth link, bent down

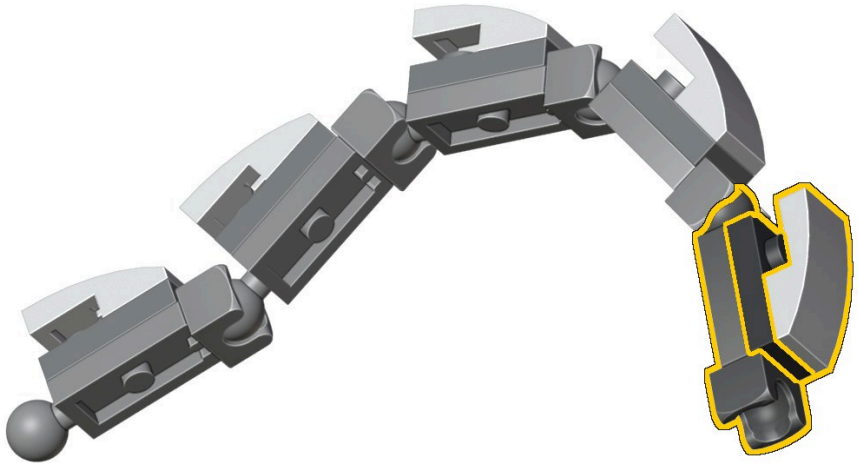

21

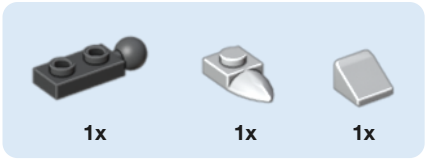

seen from below

The fifth link, bent down further

22

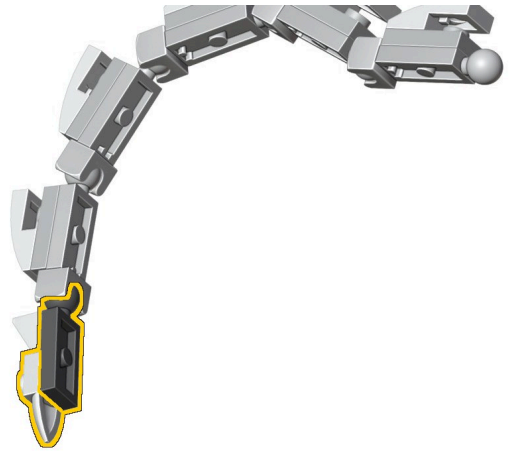

Leg

seen from below

The foot: a plate with a ball at one end only, pointing down. On its far stud a plate with a tooth, the tooth past the end: the claw. A cheese slope behind it

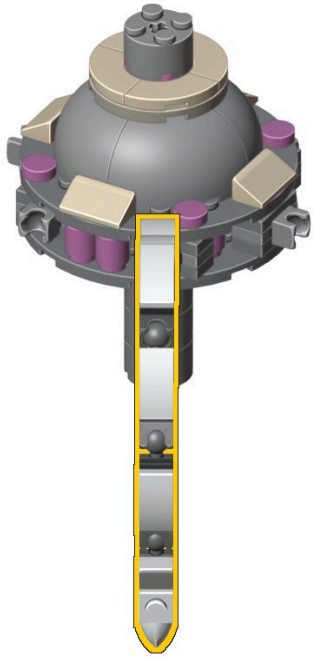

From behind: the outlined pieces.

GUARDIAN
23

1x

Snap the first leg's ball into a front socket, the leg pointing straight out from the middle of the body

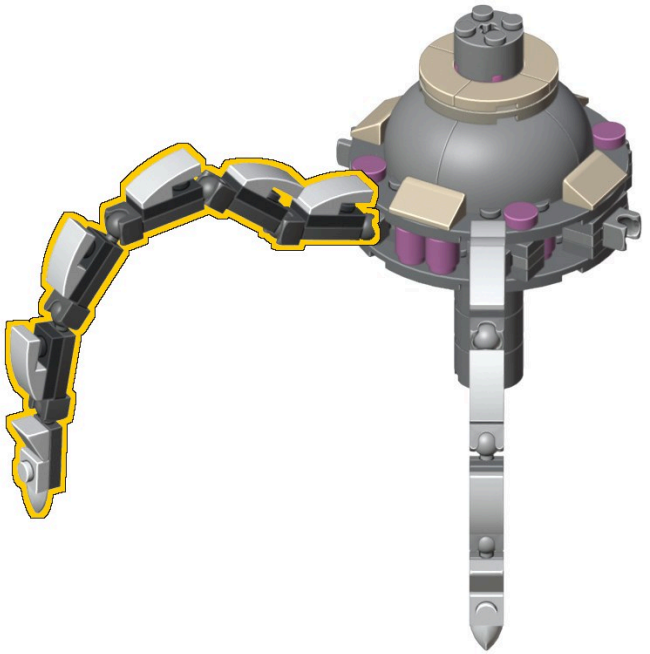

24

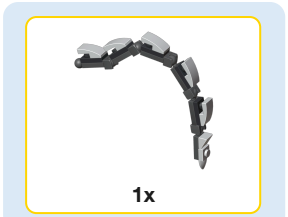

1x

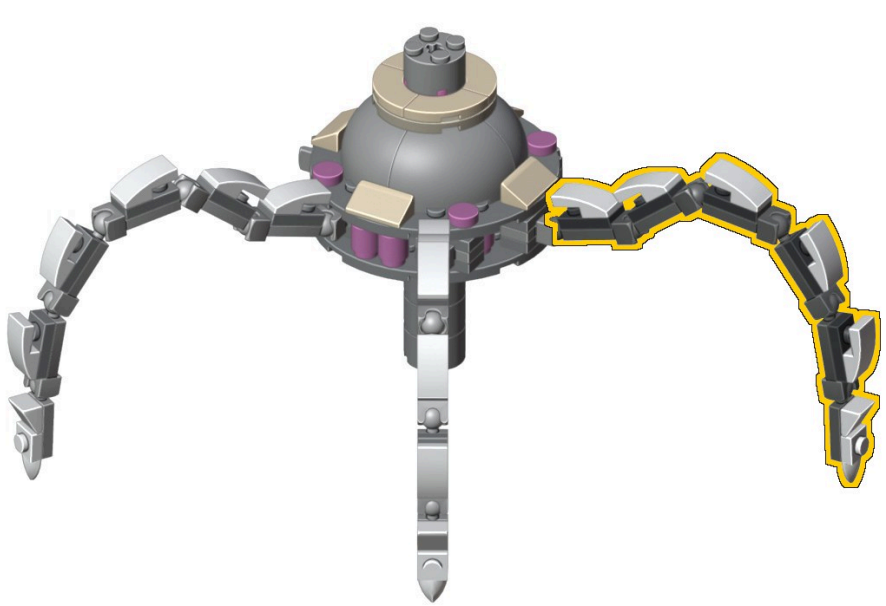

The other front leg

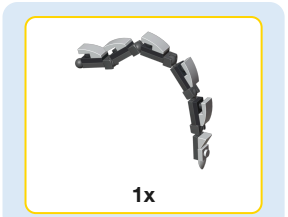

25

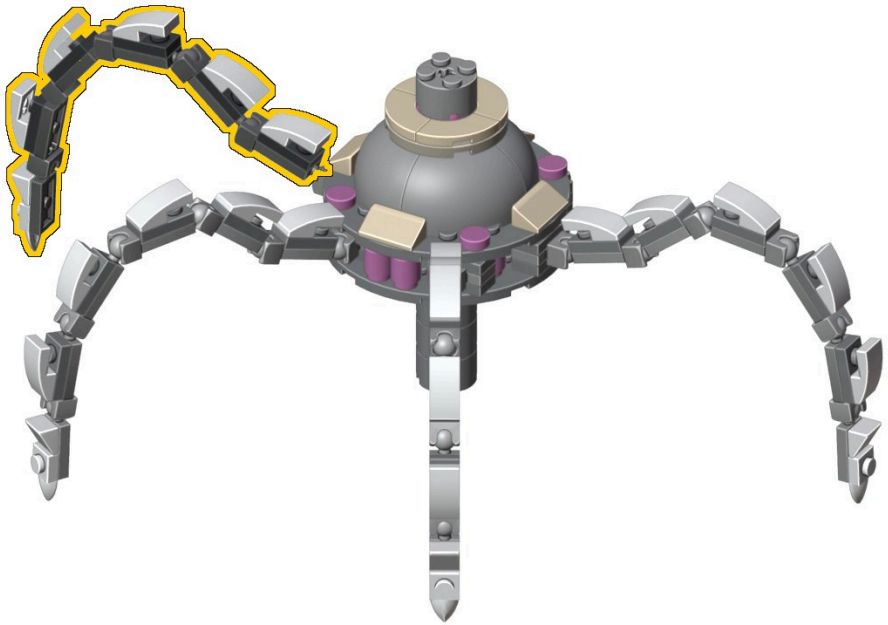

A leg in the middle of each side: the right one

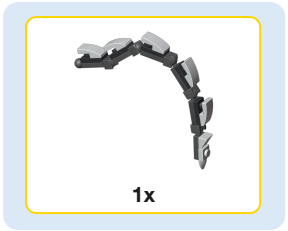

26

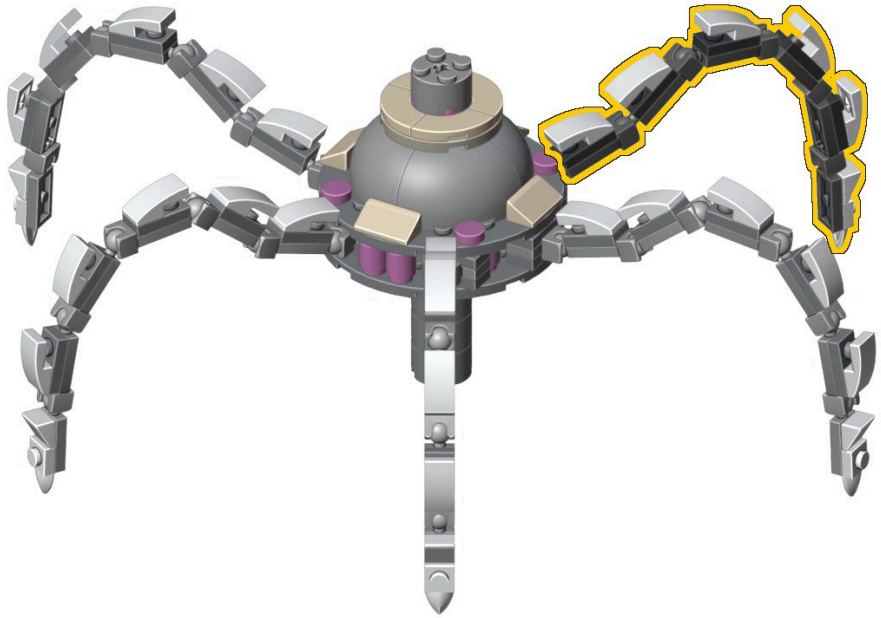

And the left one

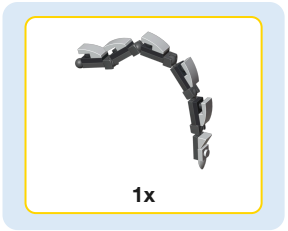

27

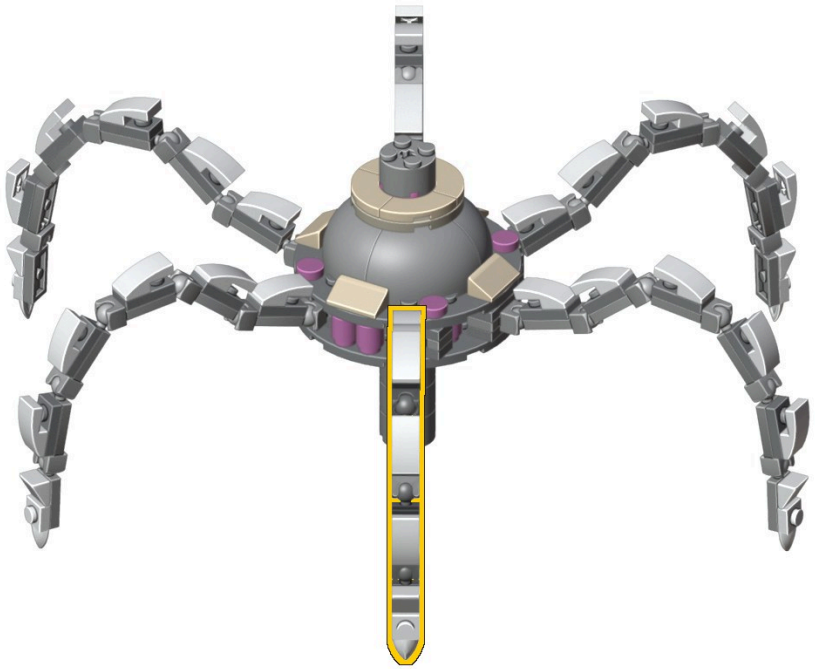

A back leg

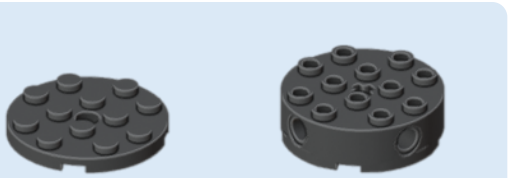

28

The sixth leg. Bend the legs until all six claws rest on the table

HEAD
29

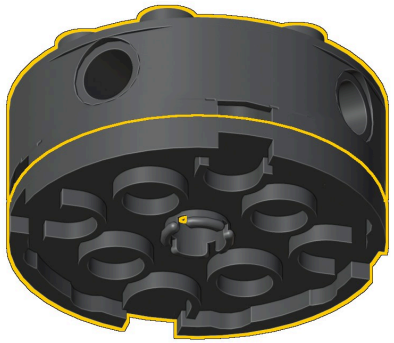

1x
4 × 4

1x
4 × 4

The head: a round 4 x 4 plate, and on it the round brick with a hole in each side

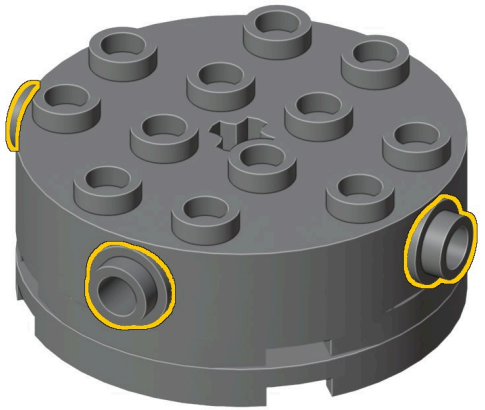

From below: the outlined pieces click in here.

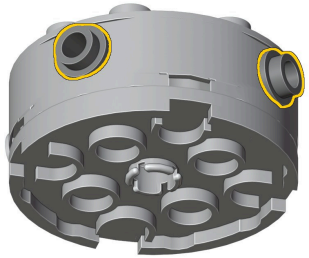

30

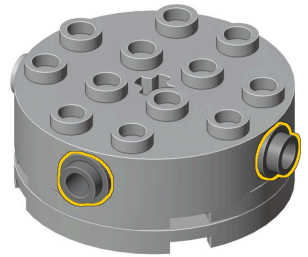

4x

Push a half pin into each of the four holes, stud out

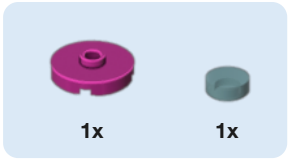

From below: the outlined pieces click in here.

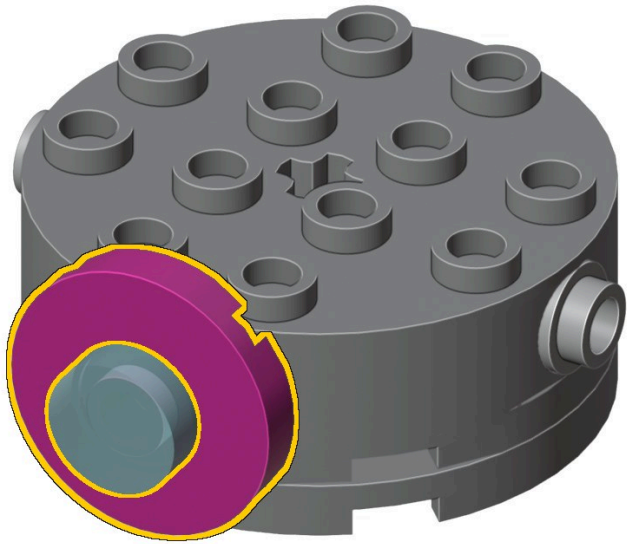

From behind: the outlined pieces.

31

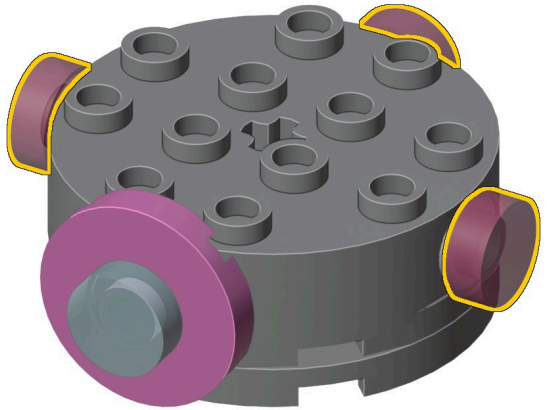

The eye, on the front pin: a pink round plate with one stud, and the clear blue round tile on it

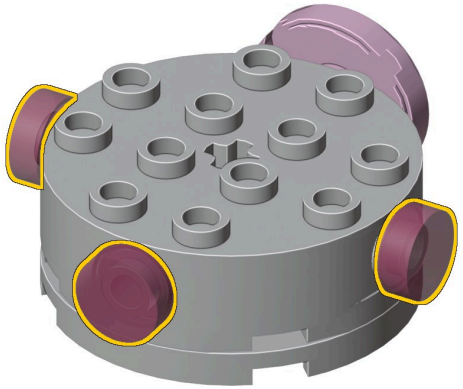

32

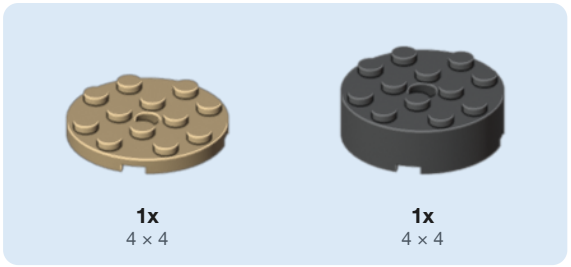

A clear pink round tile on each of the other three pins

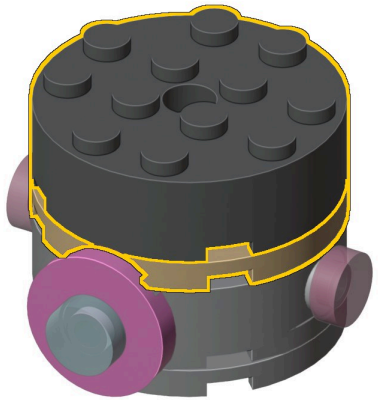

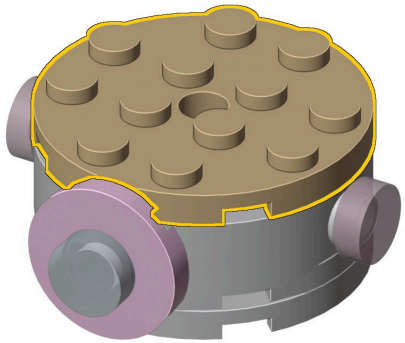

From behind: the outlined pieces.

33

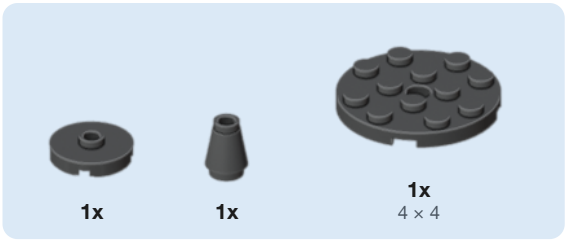

A tan round plate, and the plain round brick: the top of the head

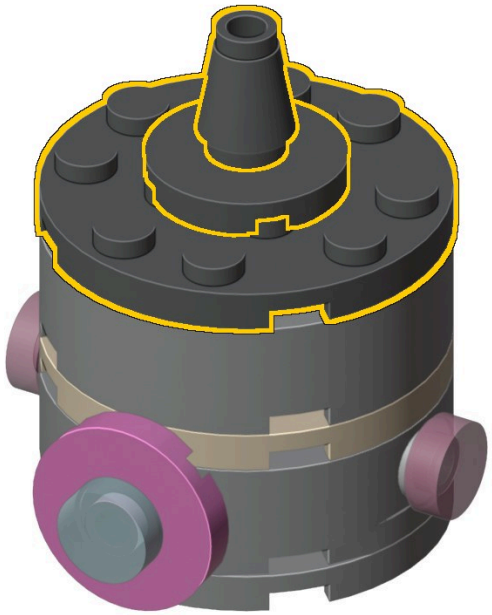

First the outlined piece: the others go on over it.

34

A round plate on top. In its middle a round plate with one stud and a cone: the spike

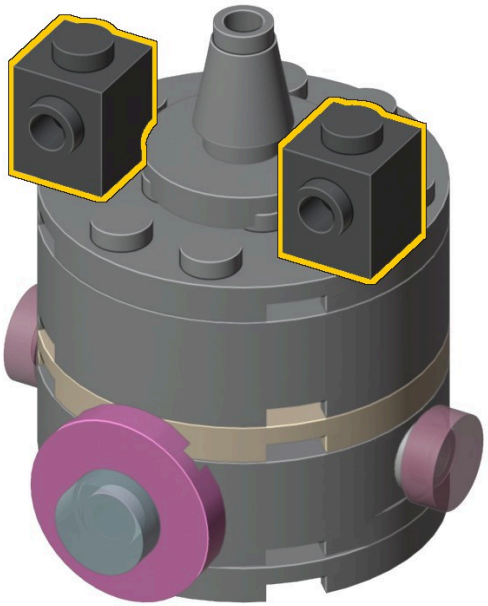

35

2x

The two horns: a brick with a stud on its side at each side of the top, stud to the front

36

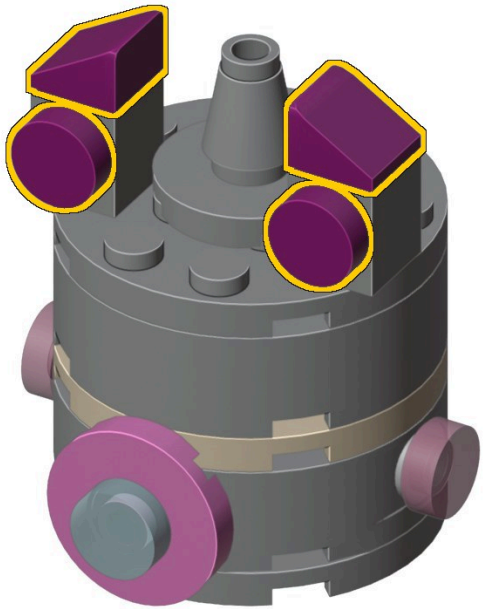

2x

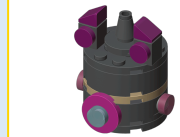

2x

A pink round tile on each of those studs, and a pink cheese slope on top of each brick, sloping outwards

GUARDIAN

About this model

It goes together in sections. Make six sockets and six legs first: a leg is a chain of five ball-jointed links and a claw. Build the round body with the sockets in the band between its two rims, stand it on the black stand, snap a leg into each socket and press the head onto the neck.

Checked on a computer

PASS	**real elements**	31 part/colour combinations: 0 not real, 0 rare
PASS	**connections**	396 connections (345 stud, 42 ball, 8 pin, 1 axle); 1 separate piece(s)
PASS	**collisions**	0 overlapping pair(s) among 183 parts
PASS	**buildability**	88 insertions tried across 5 submodel(s); 0 problem(s)
PASS	**stability**	about 122 g; centre of mass inside the base (100% margin); tips at 59.0 deg
PASS	**mechanism**	24 poses swept for 6 moving group(s); 0 gear pair(s); 0 problem(s)
PASS	**electrics**	no electrics in this model
PASS	**technique**	0 note(s)

Not yet built with real bricks

These checks catch most mistakes a designer can make, but not all: clutch power, part tolerances, how stiff a long axle is and how the model survives handling can only be judged with real bricks. If you build it, we would love to hear how it went.
