

Bricks

A LEGO® BRICK MODEL OF

Xenomorph

A posable alien with a domed head, tubes on its back and a spined tail, in 49 pieces. Designed by yodakya.

Designed by yodakya

49 pieces · 34 steps · 10 sections

Unofficial fan-made building instructions

Not physically build-tested. Every part is a real LEGO element and the model was checked on a computer (connections, collisions, every step, balance), but nobody has built it with real bricks yet.

Before you start

An unofficial fan-made manual

This booklet is not a LEGO product. It was generated from the model file by a computer program and checked part by part.

The model was designed by yodakya (<https://rebrickable.com/mocs/MOC-34927/>). These steps were worked out from it here; they are not the designer's own instructions.

Not physically build-tested

The model and these steps were checked on a computer only: every part/colour is a real LEGO element, all 50 connections between parts were matched in 3D, no two parts overlap, every part can be pushed into place in its step, and the model's balance was estimated. Not tested: how firmly parts hold, part tolerances and how it copes with handling. Take your time and support the model while you work.

The finished model

About 2.2×11.5 cm and 7.4 cm tall, about 14 g (estimated).

It goes together in small sections that clip onto each other. Start with the hips, a T-shaped bar: build the two legs flat on the table and slide one onto each end. Clip on the torso, the arms and the head, push the back with its four tubes into the stud behind the torso, then click the tail together link by link and hang it on the hinge.

You will need

- The 49 pieces in 2 colours listed at the back, with their LEGO element IDs and BrickLink numbers.
- A brick separator for pieces that sit too deep for a finger.

Tips

- Sort the pieces by colour before you start.
- Build the sections in order: each sub-assembly is finished before it is used.
- New pieces in a step have a yellow outline; earlier pieces are drawn paler.
- It stands on three points: its two feet and the barb at the end of its tail. If the barb does not reach the table, tip the body back a little at the hips.
- The tail's hinges click every 22.5 degrees. Count the clicks in each step; a hinge left between two clicks does not hold.

The 2 colours

■ Black: 48

■ Flat Silver: 1

How to read the steps

Parts and step number

7

The parts for the step and how many of each, then the step number. The parts of a step are drawn at one scale, so a longer one looks longer; a tile or a long plate also has its size in studs under it.

New parts

The parts added in a step have a yellow outline and are drawn in full colour; the parts from earlier steps are drawn paler.

Sub-assemblies

A yellow-framed picture means: put in the sub-assembly you built in its own section. "Build 4x" means you need four of them.

Sections

Each section starts with its name at the top of the page. Sections are built in the order they appear.

Seen from below

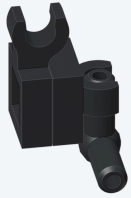

When a step adds parts underneath, the picture shows the model from below. A small label says so (and "seen from behind" likewise). A piece the picture cannot show gets a small picture beside it, ringed in yellow, from the side it can be seen from: where it clicks in.

Insert direction

Some parts slide in sideways (axles through bearings, gears onto axles). The picture shows where they end up; push them in along their axle.

Build overview

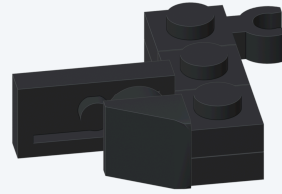

The model is built in 10 sections. Each is finished before it is used.

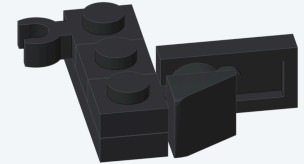

1. Hips
steps 1–2

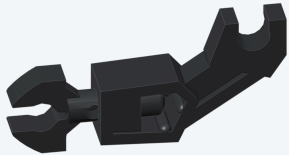

2. Xenomorph
steps 3, 8, 13–14, 16–17, 21, 25, 34

3. Right leg
steps 4–7

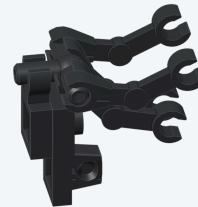

4. Left leg
steps 9–12

5. Arm x2
step 15

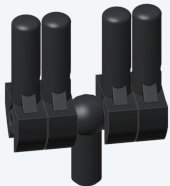

6. Head
steps 18–20

7. Back
steps 22–24

8. Tail
steps 26–29, 31, 33

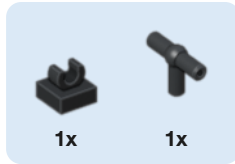

9. Crest
step 30

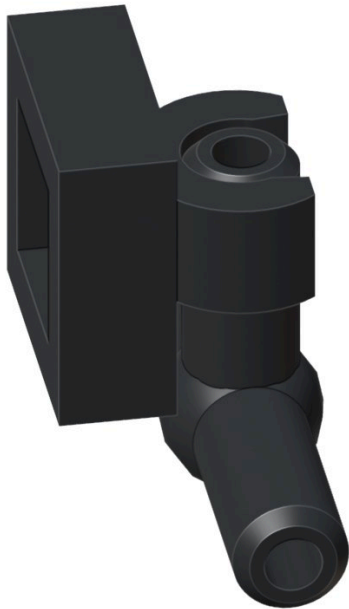

10. Sting
step 32

HIPS

1

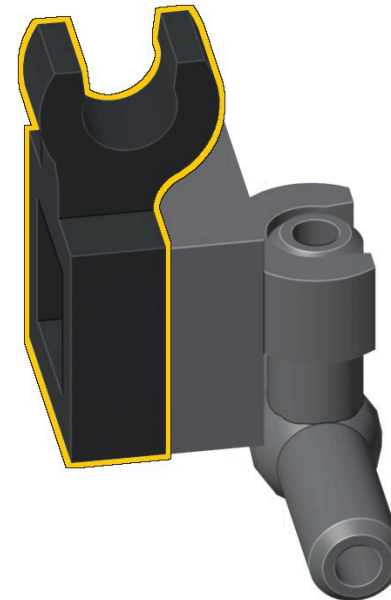

The hips: a T-bar, stem up. Clip the tile with a clip onto the top end of the stem from the front, its underside facing forward

2

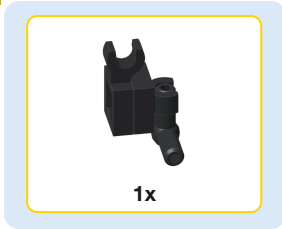

Press a plate with a level clip onto the underside of the tile, clip up: the waist

Hips

XENOMORPH

3

Stand the hips' T-bar up, stem leaning a little forward

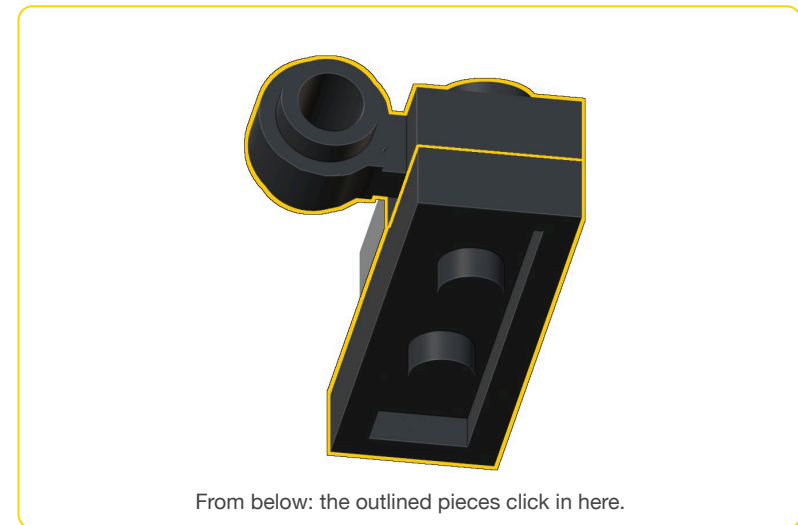

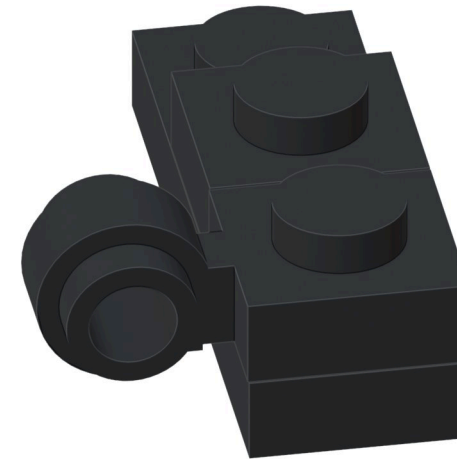

RIGHT LEG

4

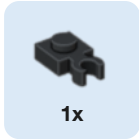

The thigh: a 1 x 3 plate. On its middle stud a 1 x 1 plate; on one end stud a plate with a ring, ring out to the side: the ankle

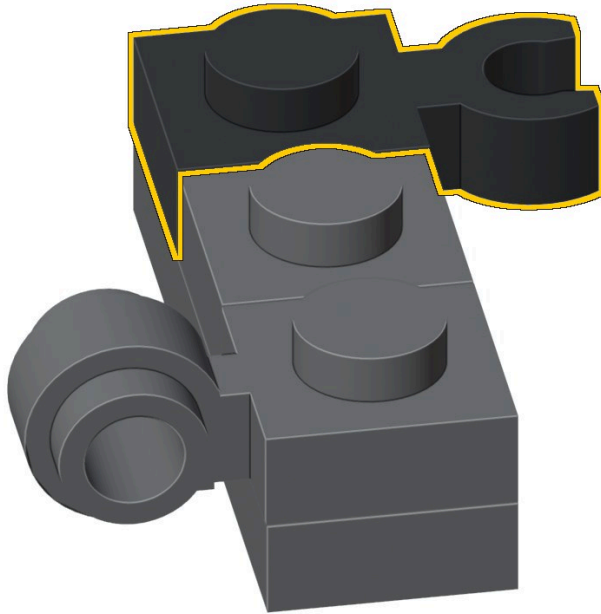

From below: the outlined pieces click in here.

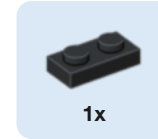

5

On the other end stud a plate with an upright clip, clip out to the other side: the hip

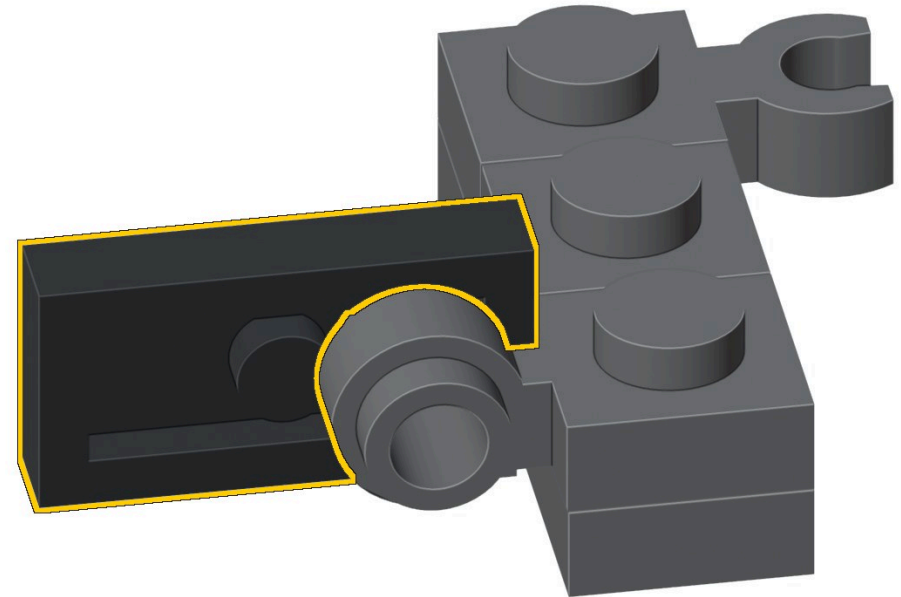

6

Right leg

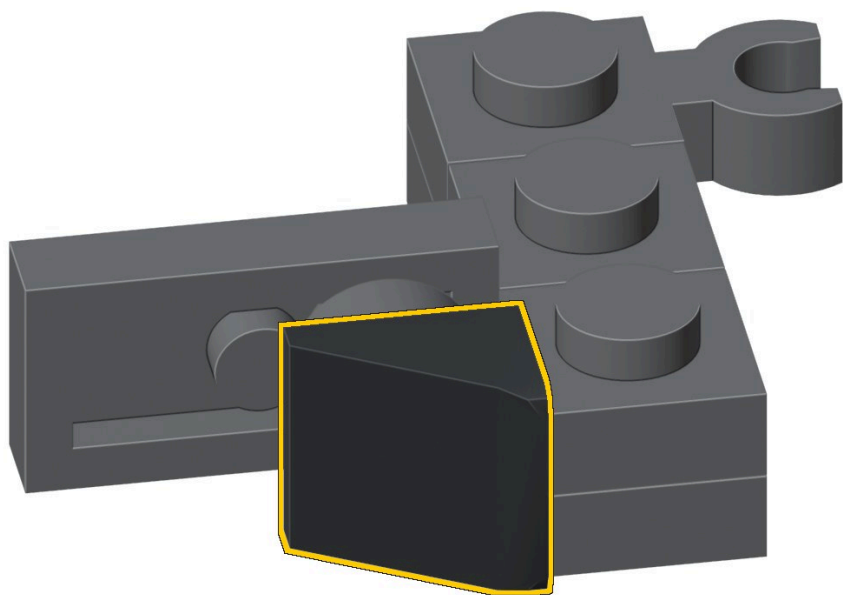

The foot: a 1 x 2 plate, standing on edge. Push one of its end holes onto the rim of the ring that faces the hip, so that it points away from the thigh

7

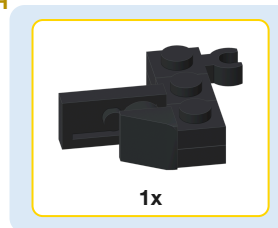

The heel: a cheese slope on the ring's other rim, its thin edge towards the toe

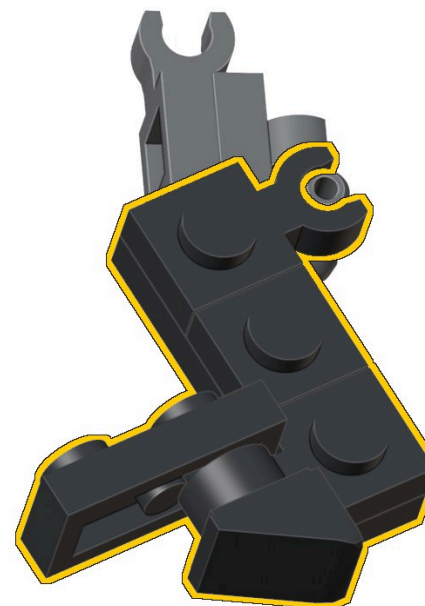

XENOMORPH

8

Slide the right leg's clip onto the end of the hip bar. The leg stands on its toe and on the slope of its heel

Xenomorph

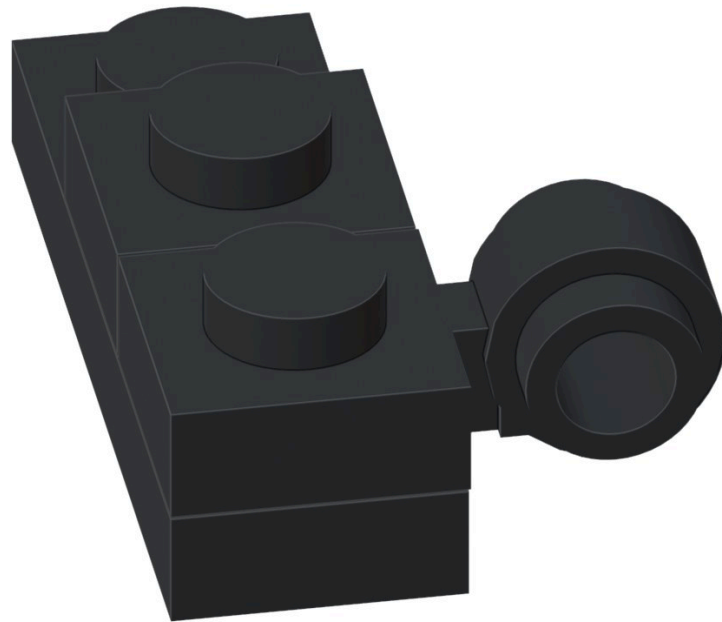

seen from below

LEFT LEG

9

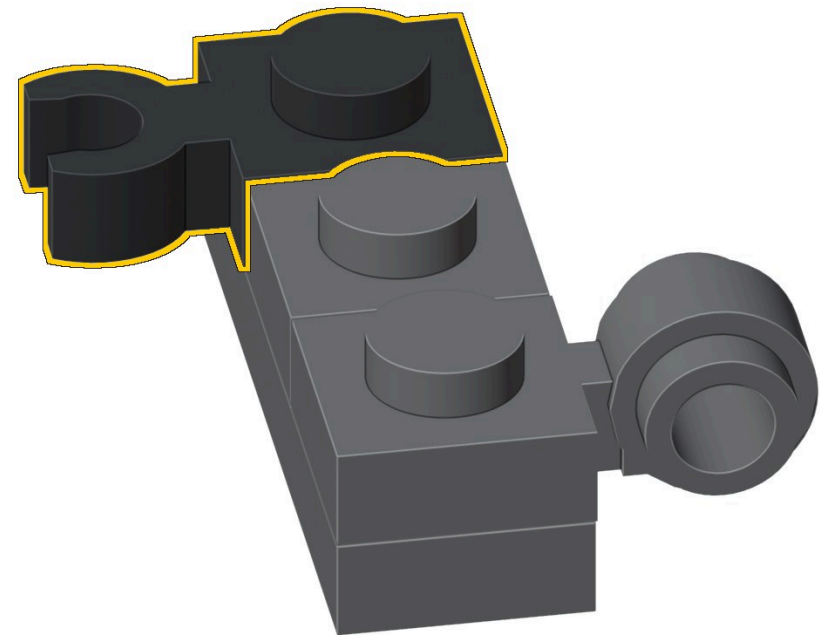

The thigh: a 1 x 3 plate. On its middle stud a 1 x 1 plate; on one end stud a plate with a ring, ring out to the side: the ankle

10

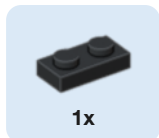

On the other end stud a plate with an upright clip, clip out to the other side: the hip

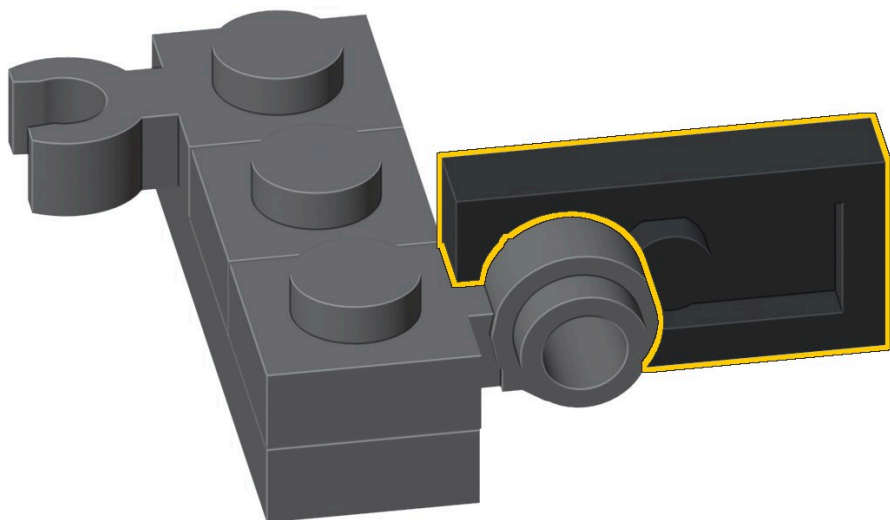

Left leg

11

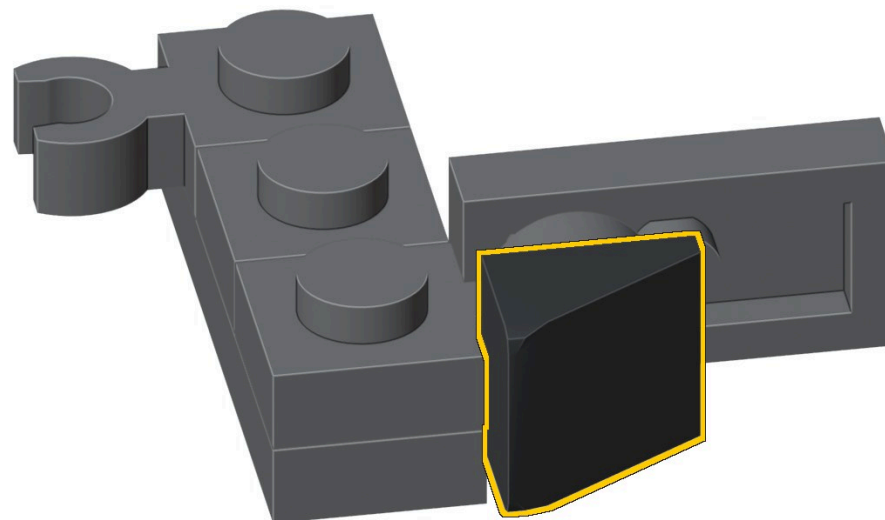

The foot: a 1 x 2 plate, standing on edge. Push one of its end holes onto the rim of the ring that faces the hip, so that it points away from the thigh

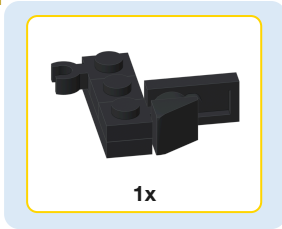

12

The heel: a cheese slope on the ring's other rim, its thin edge towards the toe

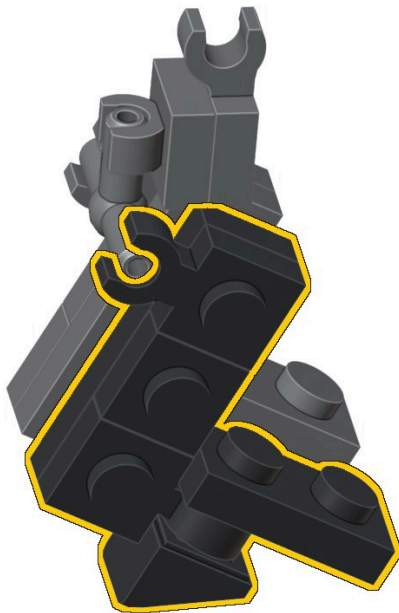

Left leg

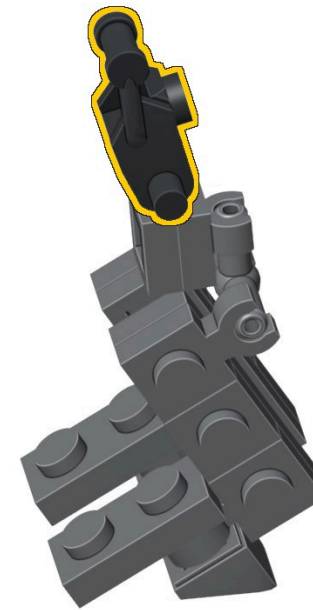

Slide the left leg onto the other end, to match

seen from behind

The torso: a battle droid's, upside down, its stud to the back. Press the thin middle of its shoulder bar down into the waist clip

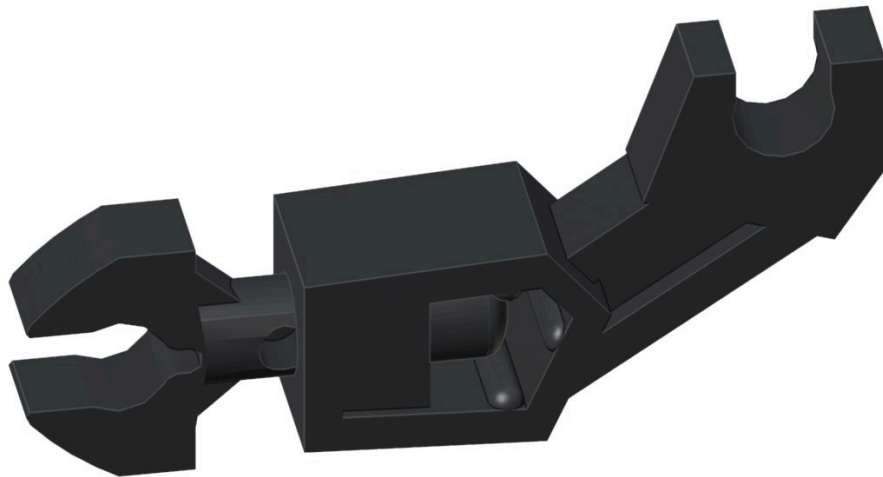

ARM · BUILD 2X

15

An arm: push a claw's bar into the hole in the end of a robot arm, as far as the picture shows, the claw's two prongs one above the other. Make two

XENOMORPH

16

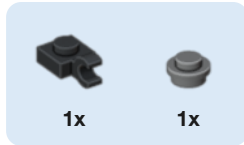

Slide an arm onto each end of the shoulder bar, reaching forward

Xenomorph

17

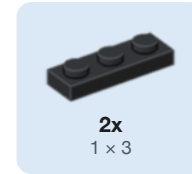

The neck: clip a plate with a level clip onto the bar at the top of the torso, from the front, studs up. Press the silver round plate onto it: the teeth

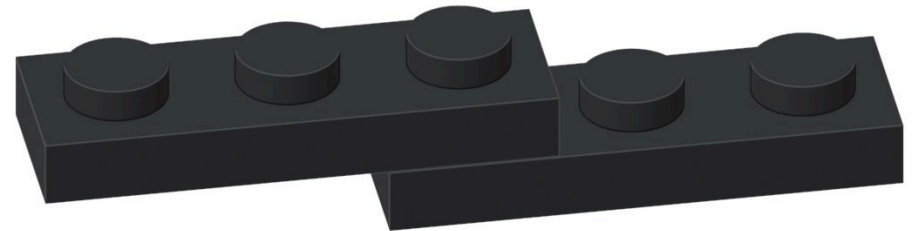

18

HEAD

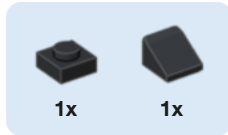

The head: two 1 x 3 plates in a line, the front one on top of the back one's first stud

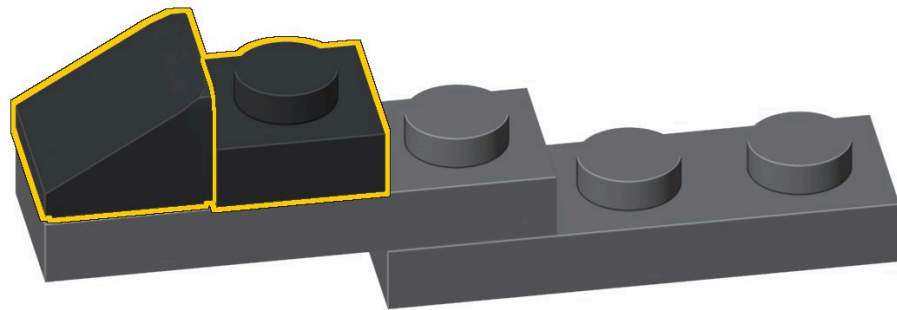

Head

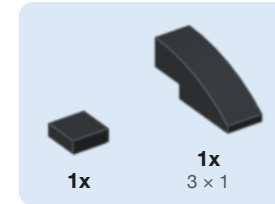

19

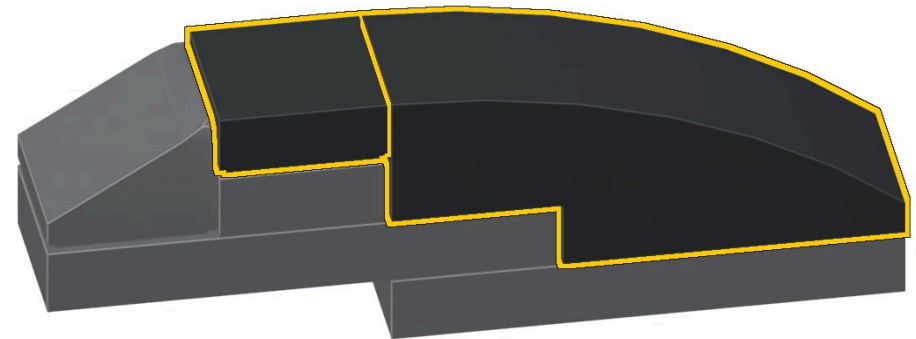

A cheese slope on the front stud, sloping down to the front: the snout. A 1 x 1 plate behind it

20

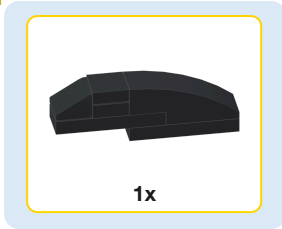

A 1 x 1 tile on the plate, and the long curved slope behind it, high end forward: the dome

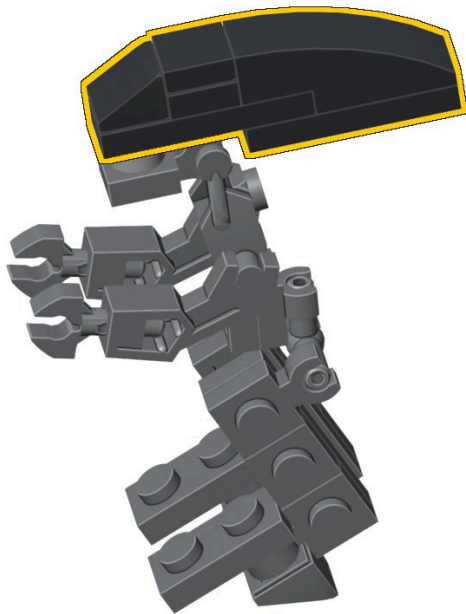

Head

XENOMORPH

21

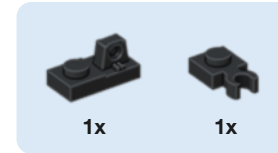

Press the head down onto the teeth, by the hole under its front end

BACK

22

The back: a plate with an upright clip. Press the hinge plate onto its stud, the hinge finger at the far end from the clip

Back

23

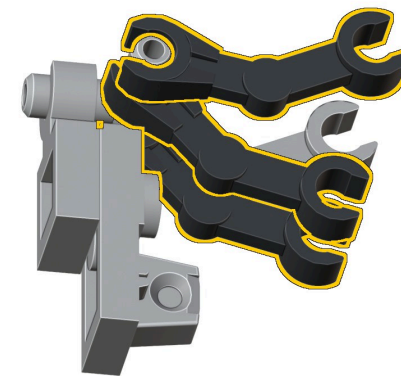

Press the stem of a T-bar into the clip, the end of the stem pointing away from the hinge plate

24

Clip four droid arms onto the cross bar, two each side of the stem, all trailing to the back: the inner two hanging low, the outer two nearly level

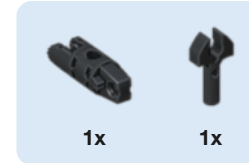

From below: the outlined pieces click in here.

Back

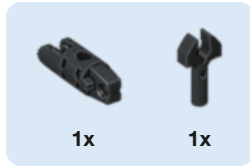

Push the stem of the back's T-bar into the stud on the torso's back, tubes trailing, hinge plate hanging down

The tail's first link: a hinge cylinder with a hole, its two-finger end forward and up. Push a claw's bar down through the hole: a spine

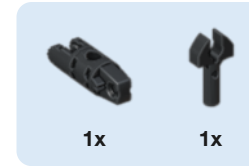

27

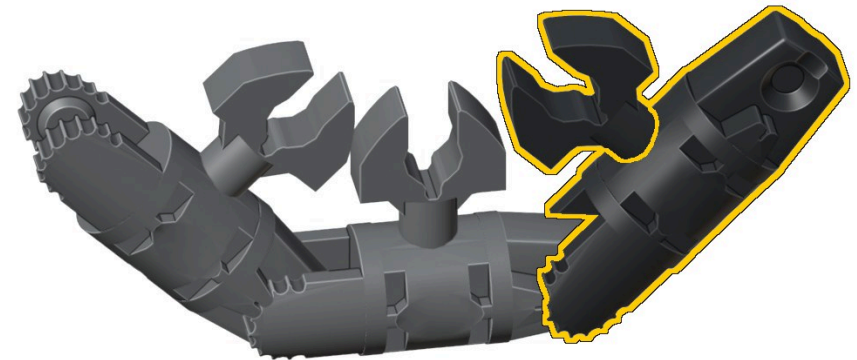

Click the second link onto the first, turned up two clicks, and give it a spine

28

Click on the third link, turned up two clicks again, and give it a spine

Tail

29

Click on the fourth link, turned down two clicks

30

CREST

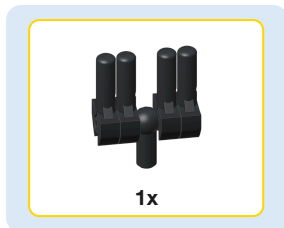

The crest: a T-bar, stem down. Clip four claws onto its cross bar, two each side of the stem, bars straight up

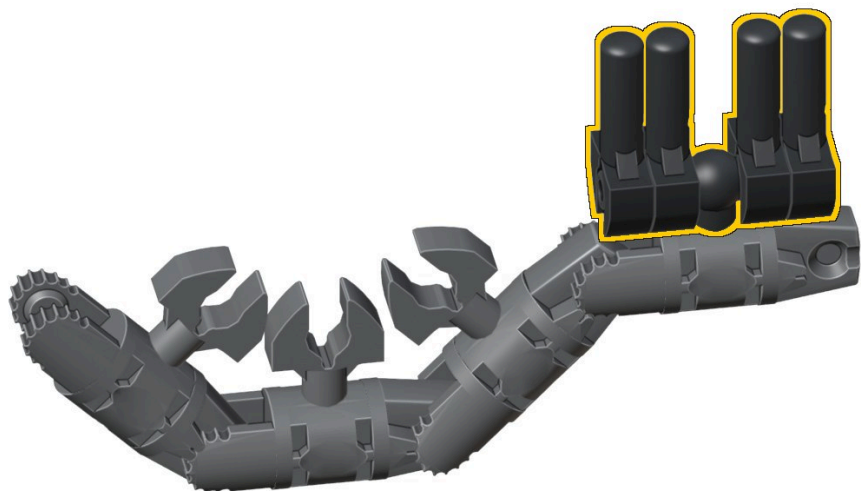

From below: the outlined pieces click in here.

Crest

TAIL 31

Push the crest's stem into the hole in the fourth link, until the claws' jaws just clear the link

STING 32

The sting: lay the barb on its side and push the short hinge cylinder onto its bar, as far as it goes. The barb curves across the cylinder's two fingers

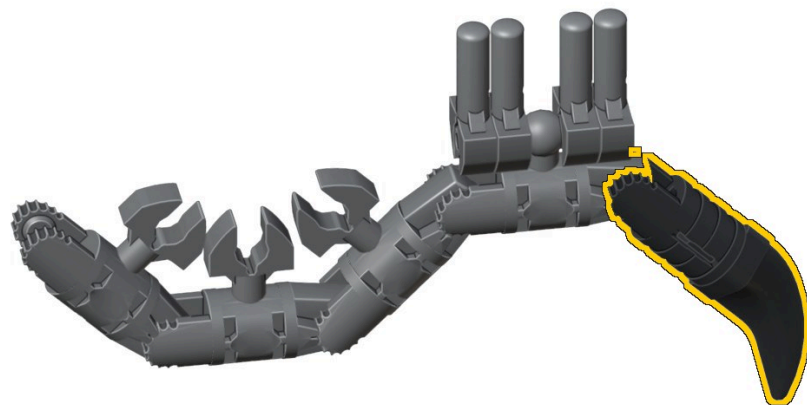

Sting

TAIL 33

Click the sting onto the end of the fourth link, turned down two clicks

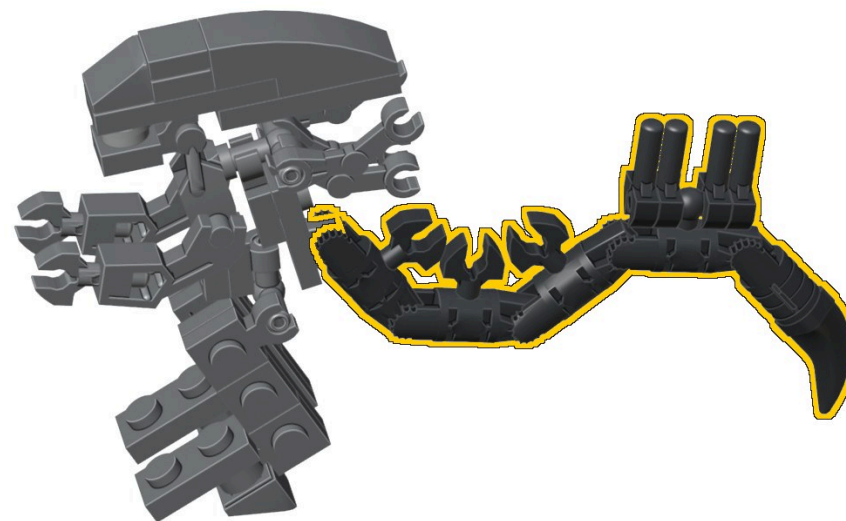

XENOMORPH 34

Xenomorph

Click the tail onto the hinge, one click up from the line of the back. The barb comes down onto the table: the third foot

Parts inventory

49 pieces in 20 part/colour lines. Bold: the LEGO element ID (what LEGO Pick a Brick sells); below: the colour and the BrickLink part number.

About this model

It goes together in small sections that clip onto each other. Start with the hips, a T-shaped bar: build the two legs flat on the table and slide one onto each end. Clip on the torso, the arms and the head, push the back with its four tubes into the stud behind the torso, then click the tail together link by link and hang it on the hinge.

Checked on a computer

WARN	real elements	20 part/colour combinations: 0 not real, 1 rare
PASS	connections	50 connections (20 stud, 16 clip, 7 bar, 5 hinge, 1 pin, 1 press); 1 separate piece(s)
PASS	collisions	0 overlapping pair(s) among 49 parts
PASS	buildability	50 insertions tried across 10 submodel(s); 0 problem(s)
PASS	stability	about 14 g; centre of mass inside the base (101% margin); tips at 16.9 deg
PASS	mechanism	no moving parts defined
PASS	electrics	no electrics in this model
PASS	technique	0 note(s)

Not yet built with real bricks

These checks catch most mistakes a designer can make, but not all: clutch power, part tolerances, how stiff a long axle is and how the model survives handling can only be judged with real bricks. If you build it, we would love to hear how it went.
