

Bricks

A LEGO® BRICK MODEL OF

Magikarp

A red fish with round eyes, an open mouth and yellow fins, in 43 pieces.

Designed by Redverse

43 pieces · 19 steps · 4 sections

Unofficial fan-made building instructions

Not physically build-tested. Every part is a real LEGO element and the model was checked on a computer (connections, collisions, every step, balance), but nobody has built it with real bricks yet.

Before you start

An unofficial fan-made manual

This booklet is not a LEGO product. It was generated from the model file by a computer program and checked part by part.

The model was designed by Redverse (<https://rebrickable.com/mocs/MOC-182443/>). These steps were worked out from it here; they are not the designer's own instructions.

Not physically build-tested

The model and these steps were checked on a computer only: every part/colour is a real LEGO element, all 64 connections between parts were matched in 3D, no two parts overlap, every part can be pushed into place in its step, and the model's balance was estimated. Not tested: how firmly parts hold, part tolerances and how it copes with handling. Take your time and support the model while you work.

The finished model

About 2.6 × 6.5 cm and 6.4 cm tall.

This Magikarp is built sideways. Two plates and a bracket make the top of its core; a 2 × 4 plate with a second bracket goes underneath upside down, and two slopes pressed over the brackets' side studs lock the halves together. An axle through the middle carries both eyes. The tail goes on the slopes, the fin brackets and belly go on from underneath, and the head is a brick with a hole, upside down at the front. Last come the eyes and side fins, the mouth, three curved bricks that round the body off, and the two yellow fins. It balances on its belly fin, so lay it on its side or hold it to show it.

You will need

- The 43 pieces in 6 colours listed at the back, with their LEGO element IDs and BrickLink numbers.
- A brick separator for pieces that sit too deep for a finger.

Tips

- Sort the pieces by colour before you start.
- Build the sections in order: each sub-assembly is finished before it is used.
- New pieces in a step have a yellow outline; earlier pieces are drawn paler.

The 6 colours

 Red: 24
 Yellow: 8
 White: 7

 Blue: 2
 Black: 1
 Lavender: 1

How to read the steps

Parts and step number

The parts for the step and how many of each, then the step number. The parts of a step are drawn at one scale, so a longer one looks longer; a tile or a long plate also has its size in studs under it.

New parts

The parts added in a step have a yellow outline and are drawn in full colour; the parts from earlier steps are drawn paler.

Sub-assemblies

A yellow-framed picture means: put in the sub-assembly you built in its own section. "Build 4x" means you need four of them.

Sections

Each section starts with its name at the top of the page. Sections are built in the order they appear.

Seen from below

When a step adds parts underneath, the picture shows the model from below. A small label says so (and "seen from behind" likewise). A piece the picture cannot show gets a small picture beside it, ringed in yellow, from the side it can be seen from: where it clicks in.

Insert direction

Some parts slide in sideways (axles through bearings, gears onto axles). The picture shows where they end up; push them in along their axle.

Build overview

The model is built in 4 sections. Each is finished before it is used.

1. Magikarp
steps 1, 3, 7-16, 19

2. Belly plate
step 2

3. Eye axle
steps 4-6

4. Fin x2
steps 17-18

MAGIKARP

1

Two 2 x 2 plates, and a bracket on their end studs: its wall hangs down over their end

BELLY PLATE

2

A bracket on the end studs of the 2 x 4 plate, its wall down over the plate's end

Belly plate

Turn the belly plate over and hold it under the stack, wall under wall. Lock them with two slopes: each goes on an upper and a lower side stud

From behind: the outlined pieces.

A blue pin in the hole under a plate, from the outside

From behind: the outlined pieces.

5

The second plate beside it, with its pin

6

The bar through both pins: the same length sticks out at each end

Eye axle

seen from below

The eye axle on the two free studs, its pins over the hollow of the 2 x 4

On the slopes' two studs: a plate, then a plate with one stud

9

The tail on that stud, upright, and a white slope on its top and bottom studs

10

Turn it over. A small bracket on each stud of the next row, side studs out, and a plate across the two

Magikarp

seen from below

11

seen from below

A plate with one stud on that plate, and a slope on the big bracket, falling to the tail

12

Magikarp

Turn it back. A plate on the axle's rear studs. The head: a brick with a hole, upside down, its studs pressed into the hollow of the 2 x 4 at the front

13

A red pin in the head's hole, and on the plate a plate with one stud and a 1 x 1 plate

14

An eye on the axle, and a triangle on the bracket's side stud: square corner forward

15

seen from behind

The same on the other side

16

Magikarp

The mouth on the red pin. Three curved bricks: behind the tower, in front of it, and upside down under the head

17

A yellow brick with a stud on two sides

18

A slope on top, falling to the front, and one on each side stud, thick end up

The fins: one on the tower, one under the belly

Parts inventory

43 pieces in 22 part/colour lines. Bold: the LEGO element ID (what LEGO Pick a Brick sells); below: the colour and the BrickLink part number.

About this model

This Magikarp is built sideways. Two plates and a bracket make the top of its core; a 2 x 4 plate with a second bracket goes underneath upside down, and two slopes pressed over the brackets' side studs lock the halves together. An axle through the middle carries both eyes. The tail goes on the slopes, the fin brackets and belly go on from underneath, and the head is a brick with a hole, upside down at the front. Last come the eyes and side fins, the mouth, three curved bricks that round the body off, and the two yellow fins. It balances on its belly fin, so lay it on its side or hold it to show it.

Checked on a computer

WARN	real elements	22 part/colour combinations: 0 not real, 1 rare
PASS	connections	64 connections (55 stud, 5 pin, 4 bar); 1 separate piece(s)
PASS	collisions	0 overlapping pair(s) among 43 parts
PASS	buildability	38 insertions tried across 4 submodel(s); 0 problem(s)
PASS	mechanism	no moving parts defined
PASS	electrics	no electrics in this model
PASS	technique	0 note(s)

Not yet built with real bricks

These checks catch most mistakes a designer can make, but not all: clutch power, part tolerances, how stiff a long axle is and how the model survives handling can only be judged with real bricks. If you build it, we would love to hear how it went.

Files
