Bricks

A LEGO® BRICK MODEL OF

The Caldwell County Courthouse

DARK RED TRIM COLOURWAY

The 1894 courthouse in Lockhart, Texas, 65 cm tall on a 45 cm lawn. Its four clocks keep real time: quartz clock inserts sit behind the red dials, and the dome lifts off to set them.

6663 pieces · 1 minifigure · 1041 steps · 18 sections

Unofficial fan-made building instructions

Not produced, sponsored or endorsed by the LEGO Group. LEGO® is a trademark of the LEGO Group. The Caldwell County Courthouse and related names, designs and instructions are © 2026 [illegible]

Not physically build-tested. Every part is a real LEGO element and the model was checked on a computer (connections, collisions, every step, balance, mechanism), but nobody has built it with real bricks yet.

Before you start

An unofficial fan-made manual

This booklet is not a LEGO product. It was generated from the model file by a computer program and checked part by part.

Not physically build-tested

The model and these steps were checked on a computer only: every part/colour is a real LEGO element, all 20311 connections between parts were matched in 3D, no two parts overlap, every part can be pushed into place in its step, and the model's balance was estimated; the mechanism was swept through its whole range. Not tested: how firmly parts hold, part tolerances and how it copes with handling. Take your time and support the model while you work.

The finished model

About 44.8 × 44.8 cm and 65.4 cm tall, about 7.1 kg (estimated).

The Caldwell County Courthouse (Alfred Giles, 1893-94): rough-faced buff stone with red trim, three storeys of tall windows under red hoods, slate mansards and iron cresting. It is built like a LEGO modular building: the lawn and walks; eight hidden columns that carry the tower and the domes; the walls as segments (four corner pavilions, eight wings, eight dome pavilions and four entrance bays, two of them with a balcony); the roof deck with its red cornice; the steep mansards with their arched dormers, attics and chimneys; the crested mansards on the corner pavilions. Then the middle: the broad belfry with its tall arched openings, four bell domes on the front and back dome pavilions (each a storey-tall stage with round windows under a slate bell), the clock stage with its four SNOT clock faces, and the lift-off top with the bell-shaped slate dome, Texas star medallions, a red finial and the arrow weather vane. Last the side porches, the oaks and the flagpoles. The clocks are real: a quartz clock insert (not LEGO) drops into a slot behind each face, so its dial shows through the white ring and its hands keep time.

You will need

- The 6663 pieces in 15 colours listed at the back, with their LEGO element IDs and BrickLink numbers.
- **4x Mini quartz clock insert, 1-3/8" (35 mm) fit-up** (not LEGO, about $5-$15 each). Press-in quartz clock movement with its own dial, hands and button cell, made for a 35 mm (1-3/8") hole: 35 mm body, a bezel of about 36-38 mm, 15-20 mm deep including the setting knob. White dial, black numerals. Clock-making and woodworking suppliers (Klockit, Rockler, Woodcraft), craft stores, Amazon or eBay: search for "1-3/8 inch mini clock insert" or "35 mm clock insert".
- Before you buy the inserts, check their size. The body behind the bezel must be 35 mm (1-3/8 in) across or less, the bezel between 34 and 40 mm (most are 36-38 mm), and the insert no deeper than 22 mm from the front of the bezel to the back of the body (lay it face down and measure how high the back stands; the setting knob may stick out a few mm more). The dial shows through a 32 mm window, so a dial up to about 31 mm shows whole.
- A button cell for each insert (usually included: SR626SW / 377 or LR44, printed on the insert).
- A brick separator for pieces that sit too deep for a finger.

Tips

- Sort the pieces by colour before you start.
- Build the sections in order: each sub-assembly is finished before it is used.
- New pieces in a step have a yellow outline; earlier pieces are drawn paler.
- The clock faces are built lying flat and pressed onto the side studs of the clock stage. Put them on before the clock inserts.
- Set each insert's time and start it before you slide it in. Slide it down its slot face first: the bezel goes behind the face plates, the body rests on the two grey rails and centres itself. Push it forward until the bezel touches the plates. If it slides back when you handle the model, a small square of foam tape behind it holds it.
- The lift-off top holds on four studs, one on each corner column. Lift it straight up: from above you reach the backs of all four inserts, their setting knobs and their batteries. Lift an insert straight out of its slot to change its battery.
- Window glass clicks into its frame from the back, before the next course goes

How to read the steps

Parts and step number

7

2x

The parts for the step and how many of each, then the step number. The parts of a step are drawn at one scale, so a longer one looks longer; a tile or a long plate also has its size in studs under it.

New parts

The parts added in a step have a yellow outline and are drawn in full colour; the parts from earlier steps are drawn paler.

Sub-assemblies

1x

A yellow-framed picture means: put in the sub-assembly you built in its own section. "Build 4x" means you need four of them.

Sections

Each section starts with its name at the top of the page. Sections are built in the order they appear.

Seen from below

When a step adds parts underneath, the picture shows the model from below. A small label says so (and "seen from behind" likewise). A piece the picture cannot show gets a small picture beside it, ringed in yellow, from the side it can be seen from: where it clicks in.

Insert direction

Some parts slide in sideways (axles through bearings, gears onto axles). The picture shows where they end up; push them in along their axle.

Build overview

The model is built in 18 sections. Each is finished before it is used.

1. The Caldwell County Courthouse
steps 1–99, 103–110, 277, 310–312 … 1035–1036, 1041

2. Column ×8
steps 100–102

3. Corner pavilion walls ×4
steps 111–176

THE CALDWELL COUNTY COURTHOUSE

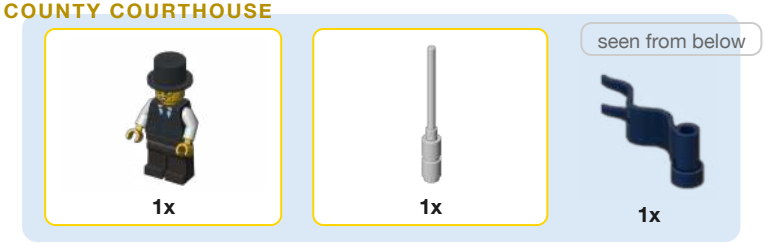
1041



It works!

Clocks that keep time

Four quartz clock inserts sit back to back inside the clock stage, one behind each face. Their dials show through a white ring framed in red, and their hands turn. The inserts are not LEGO; the stand-ins in the pictures are drawn at the largest size that fits.

A lift-off dome

The cornice, the dome and the weather vane lift off in one piece. Underneath, the backs of the four inserts face the open middle of the tower, so you can set the clocks and change their batteries.

About this model

The Caldwell County Courthouse (Alfred Giles, 1893-94): rough-faced buff stone with red trim, three storeys of tall windows under red hoods, slate mansards and iron cresting. It is built like a LEGO modular building: the lawn and walks; eight hidden columns that carry the tower and the domes; the walls as segments (four corner pavilions, eight wings, eight dome pavilions and four entrance bays, two of them with a balcony); the roof deck with its red cornice; the steep mansards with their arched dormers, attics and chimneys; the crested mansards on the corner pavilions. Then the middle: the broad belfry with its tall arched openings, four bell domes on the front and back dome pavilions (each a storey-tall stage with round windows under a slate bell), the clock stage with its four SNOT clock faces, and the lift-off top with the bell-shaped slate dome, Texas star medallions, a red finial and the arrow weather vane. Last the side porches, the oaks and the flagpoles. The clocks are real: a quartz clock insert (not LEGO) drops into a slot behind each face, so its dial shows through the white ring and its hands keep time.

Checked on a computer

PASS	**real elements**	164 part/colour combinations: 0 not real, 0 rare; 3 minifig component(s); 3 non-LEGO hardware stand-in(s), not checked
PASS	**connections**	20311 connections (20032 stud, 100 hinge, 60 press, 37 pin, 36 gen, 29 axle, 9 bar, 6 kit, 2 clip); 1 separate piece(s)
PASS	**collisions**	0 overlapping pair(s) among 6681 parts
PASS	**buildability**	3965 insertions tried across 20 submodel(s); 0 problem(s)
PASS	**stability**	about 7137 g; centre of mass inside the base (100% margin); tips at 49.3 deg
PASS	**mechanism**	24 poses swept for 9 moving group(s); 0 gear pair(s); 0 problem(s)
PASS	**electrics**	no electrics in this model
PASS	**technique**	0 note(s)

Not yet built with real bricks

These checks catch most mistakes a designer can make, but not all: clutch power, part tolerances, how stiff a long axle is and how the model survives handling can only be judged with real bricks. If you build it, we would love to hear how it went.

Files

3D model (LDraw, opens in BrickLink Studio, LeoCAD and LDCad), parts lists for BrickLink and LEGO Pick a Brick, and an interactive 3D viewer: **bricks.superfun.games/m/caldwell_courthouse**
