

Bricks

A LEGO® BRICK MODEL OF

VHS Cassette

A 1:1 VHS tape, within a few millimetres of the real 187 x 103 x 25 mm cassette. Swing the dust flap up to see the tape; watch the reels turn through the windows.

384 pieces · 104 steps · 8 sections

Unofficial fan-made building instructions

Not physically build-tested. Every part is a real LEGO element and the model was checked on a computer (connections, collisions, every step, balance, mechanism), but nobody has built it with real bricks yet.

Not produced, sponsored or endorsed by the LEGO Group. LEGO® is a trademark of the LEGO Group. VHS Cassette and related names belong to their owners. Made with brickkit · 2026-09-30

Before you start

An unofficial fan-made manual

This booklet is not a LEGO product. It was generated from the model file by a computer program and checked part by part.

Not physically build-tested

The model and these steps were checked on a computer only: every part/colour is a real LEGO element, all 996 connections between parts were matched in 3D, no two parts overlap, every part can be pushed into place in its step, and the model's balance was estimated; the mechanism was swept through its whole range. Not tested: how firmly parts hold, part tolerances and how it copes with handling. Take your time and support the model while you work.

The finished model

About 18.4 × 10.2 cm and 2.6 cm tall, about 313 g (estimated).

Built like a real cassette, from the inside out. First the chassis: the bottom with its drive holes and screw heads, the lamp tube, the reel-lock release, the guide rollers and the tape stretched across the mouth. Two reels drop onto their red spindles: a full supply reel and a nearly empty take-up reel. The end walls go on, then the top shell, built upside down with its grip bands, recessed label, spine label and two big windows, is lowered over everything. Last, the full-length dust flap hangs on two Technic pins.

You will need

- The 384 pieces in 6 colours listed at the back, with their LEGO element IDs and BrickLink numbers.
- A brick separator for pieces that sit too deep for a finger.

Tips

- Sort the pieces by colour before you start.
- Build the sections in order: each sub-assembly is finished before it is used.
- New pieces in a step have a yellow outline; earlier pieces are drawn paler.
- Each reel turns on its red Technic axle in the chassis' round holes. The axle's end shows in the drive hole underneath: turn it with a fingertip to wind the tape.
- Lower the top shell straight down so the window hangers find their ledges and the reel hubs slide under the windows.
- The write-protect tab on the back is a single tile: pull it off to protect your recording.

The 6 colours

 Black: 332	 Flat Silver: 5
 White: 32	 Light Bluish Gray: 3
 Trans-Clear: 10	 Red: 2

How to read the steps

Parts and step number

7

The parts for the step and how many of each, then the step number. All parts are drawn at one scale.

New parts

The parts added in a step have a yellow outline and are drawn in full colour; the parts from earlier steps are drawn paler.

Sub-assemblies

A yellow-framed picture means: put in the sub-assembly you built in its own section. "Build 4x" means you need four of them.

Sections

Each section starts with its name at the top of the page. Sections are built in the order they appear.

Seen from below

When a step adds parts underneath, the picture shows the model from below. A small label says so.

Insert direction

Some parts slide in sideways (axles through bearings, gears onto axles). The picture shows where they end up; push them in along their axle.

Build overview

The model is built in 8 sections. Each is finished before it is used.

1. Chassis
steps 1–32

2. VHS Cassette
steps 33, 40, 47–48, 98, 104

3. Supply reel (full)
steps 34–39

4. Take-up reel (nearly empty)
steps 41–46

5. Top shell
steps 49–75, 79–90, 96–97

6. Face label
steps 76–78

7. Window x2
steps 91–95

8. Dust flap
steps 99–103

CHASSIS

1

Chassis, bottom layer: the Technic plates' middle holes are the reel drive holes and the lamp hole; silver screw heads sit flush underneath

2

DUST FLAP

99

Dust flap, built flat: plates for the two lower rows

100

A 1 x 3 plate at each end reaches the top row

Dust flap

101

2 x N tiles: their top halves hang over the plates and make the flap's top row

102

Bottom row of tiles

103

seen from below

Turn it over: Technic bricks at the ends are the flap's cheeks

VHS CASSETTE

104

Hold the dust flap in place and push a pin through each cheek

VHS Cassette

It works!

Dust flap

The whole front edge is the flap. It swings up and out 90 degrees on two Technic pins through the end cheeks, uncovering the tape between two white guide rollers.

Turning reels

Each reel turns on a red Technic axle in round holes in the chassis. Watch the supply and take-up packs through the clear windows, or turn a spindle from underneath like a VCR does.

Parts inventory

About this model

Built like a real cassette, from the inside out. First the chassis: the bottom with its drive holes and screw heads, the lamp tube, the reel-lock release, the guide rollers and the tape stretched across the mouth. Two reels drop onto their red spindles: a full supply reel and a nearly empty take-up reel. The end walls go on, then the top shell, built upside down with its grip bands, recessed label, spine label and two big windows, is lowered over everything. Last, the full-length dust flap hangs on two Technic pins.

Checked on a computer

PASS	mechanism	24 poses swept for 3 moving group(s); 0 gear pair(s); 0 problem(s)
PASS	electrics	no electrics in this model
PASS	technique	0 note(s)

Not yet built with real bricks

These checks catch most mistakes a designer can make, but not all: clutch power, part tolerances, how stiff a long axle is and how the model survives handling can only be judged with real bricks. If you build it, we would love to hear how it went.
