

Bricks

A LEGO® BRICK MODEL OF

VHS Cassette

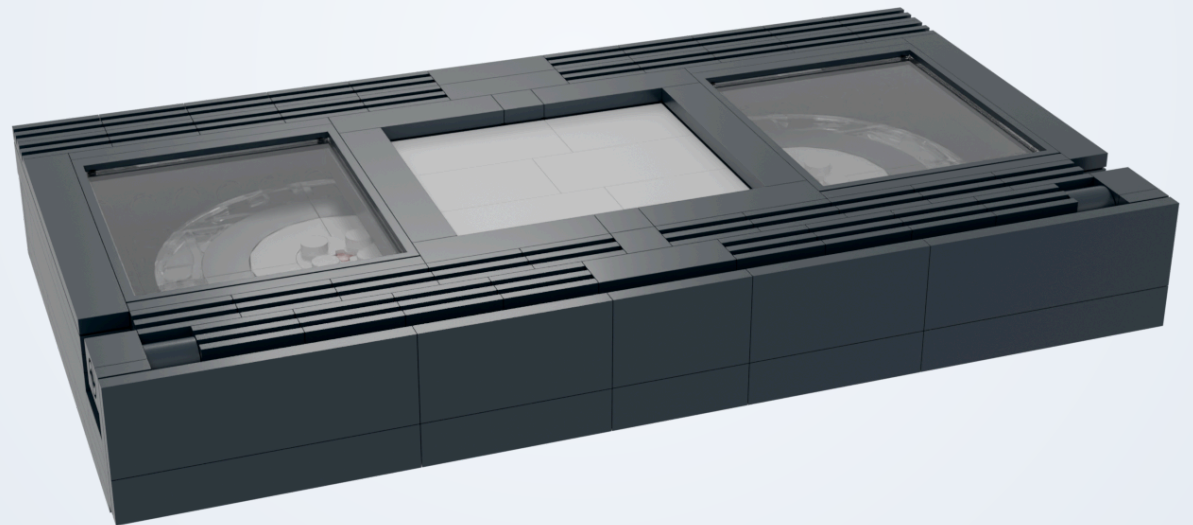

A 1:1 VHS tape, within a few millimetres of the real 187 x 103 x 25 mm cassette. Swing the dust flap up to see the tape; watch the reels turn through the windows.

384 pieces · 139 steps · 14 sections

Unofficial fan-made building instructions

Built with real bricks. This model has been built from these instructions, and it works. Every part is a real LEGO element, and the model was also checked on a computer (connections, collisions, every step, balance, mechanism).

Not produced, sponsored or endorsed by the LEGO Group. LEGO® is a trademark of the LEGO Group. VHS Cassette and related names belong to their owners. Made with brickkit · 2026-10-09

Before you start

An unofficial fan-made manual

This booklet is not a LEGO product. It was generated from the model file by a computer program and checked part by part.

Built with real bricks

These steps have been followed with real bricks from start to finish, and the finished model works, moving parts and all. The instructions were corrected from that build. They were also checked on a computer: every part/colour is a real LEGO element, all 996 connections between parts were matched in 3D, no two parts overlap and every part can be pushed into place in its step. Take your time and support the model while you work.

The finished model

About 18.4 × 10.2 cm and 2.6 cm tall, about 313 g (estimated).

Built like a real cassette, from the inside out. First the chassis: the bottom with its drive holes and screw heads, the lamp tube, the reel-lock release, the guide rollers and the tape stretched across the mouth. Two reels drop onto their red spindles: the supply reel and the take-up reel. The end walls go on, then the top shell, built upside down with its grip bands, recessed label, spine label and two big windows, is lowered over everything. Last, the full-length dust flap hangs on two Technic pins.

You will need

- The 384 pieces in 5 colours listed at the back, with their LEGO element IDs and BrickLink numbers.
- A brick separator for pieces that sit too deep for a finger.

Tips

- Sort the pieces by colour before you start.
- Build the sections in order: each sub-assembly is finished before it is used.
- New pieces in a step have a yellow outline; earlier pieces are drawn paler.
- Each reel turns on its red Technic axle in the chassis' round holes. The axle's end shows in the drive hole underneath: turn it with a fingertip to wind the tape.
- Lower the top shell straight down so the window hangers find their ledges and the reel hubs slide under the windows.
- The write-protect tab on the back is a single tile: pull it off to protect your recording.

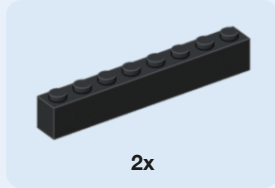

The 5 colours

- | | |
|---|--|
|  Black: 335 |  Flat Silver: 5 |
|  White: 32 |  Red: 2 |
|  Trans-Clear: 10 | |

How to read the steps

Parts and step number

7

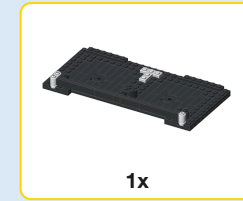

The parts for the step and how many of each, then the step number. The parts of a step are drawn at one scale, so a longer one looks longer; a tile or a long plate also has its size in studs under it.

New parts

The parts added in a step have a yellow outline and are drawn in full colour; the parts from earlier steps are drawn paler.

Sub-assemblies

A yellow-framed picture means: put in the sub-assembly you built in its own section. "Build 4x" means you need four of them.

Sections

Each section starts with its name at the top of the page. Sections are built in the order they appear.

Seen from below

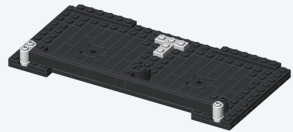

When a step adds parts underneath, the picture shows the model from below. A small label says so (and "seen from behind" likewise). A piece the picture cannot show gets a small picture beside it, ringed in yellow, from the side it can be seen from: where it clicks in.

Insert direction

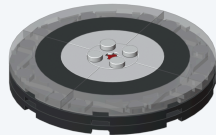

Some parts slide in sideways (axles through bearings, gears onto axles). The picture shows where they end up; push them in along their axle.

Build overview

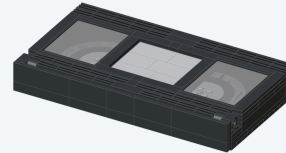

The model is built in 14 sections. Each is finished before it is used.

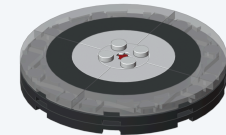

1. Chassis
steps 1–53

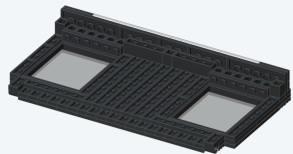

2. Supply reel (full)
steps 54–58

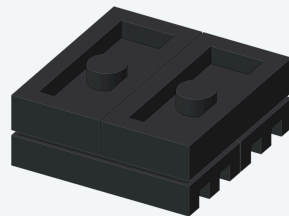

3. VHS Cassette

Turn it over: Technic bricks at the ends are the flap's cheeks

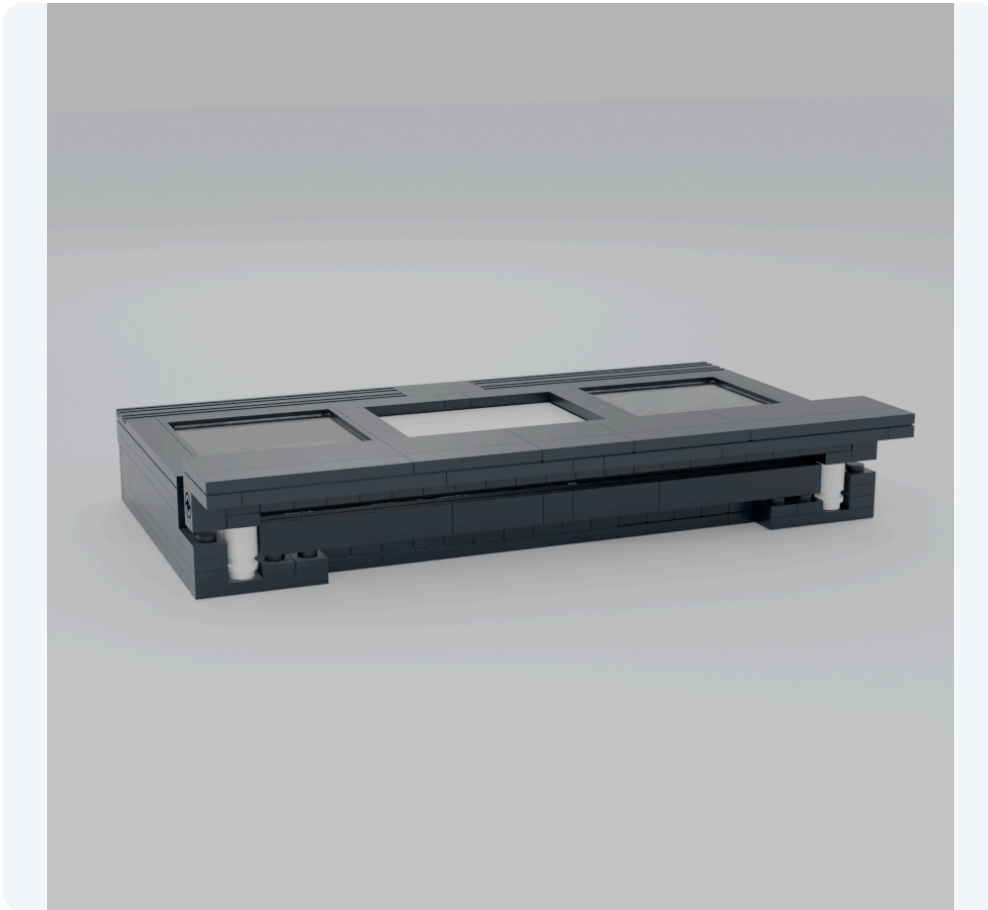

Hold the dust flap in place and push a pin through each cheek

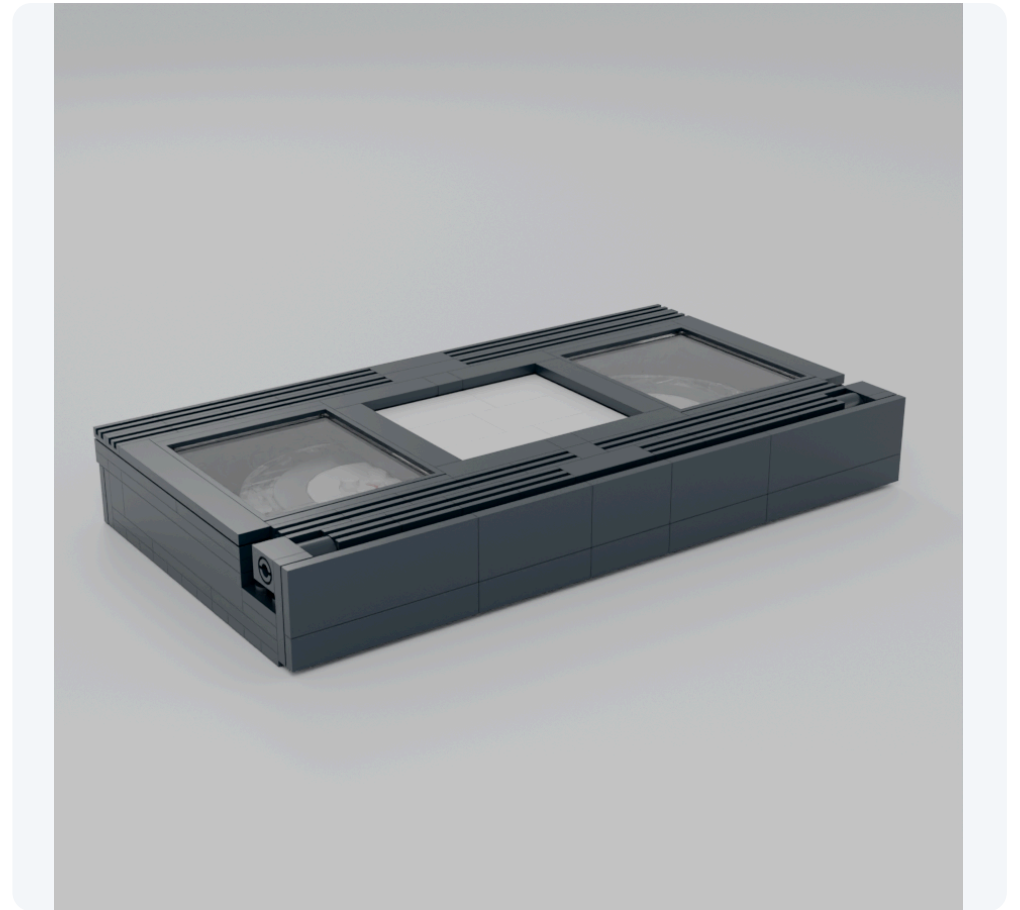

First the outlined pieces: the others go on over them.

It works!

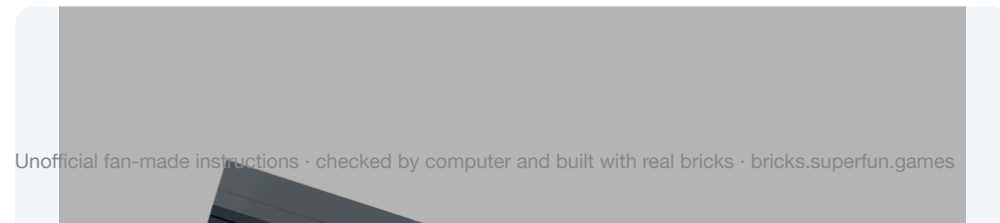

Dust flap

The whole front edge is the flap. It swings up and out 90 degrees on two Technic pins through the end cheeks, uncovering the tape between two white guide rollers.

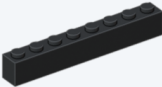

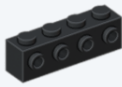

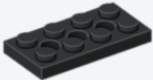

Turning reels

Each reel turns on a red Technic axle in round holes in the chassis. Watch the supply and take-up packs through the clear windows, or turn a spindle from underneath like a VCR does.

Built with real bricks

The computer checks catch most mistakes a designer can make; a real build caught the rest, and these instructions were corrected from it. If you build it too, we would love to hear how it went.
