Bricks

A LEGO® BRICK MODEL OF

Baby Metroid Lamp

The larval Metroid from Super Metroid, about 18 cm across and 32 cm tall on its clear hover stand, made into a tap lamp: press it down and the fangs bite and the nuclei light up; press again to turn them off.

2903 pieces · 219 steps · 11 sections

Not produced, sponsored or endorsed by the LEGO Group. LEGO® is a trademark of the LEGO Group. Baby Metroid Lamp and related names belong to their owners. Made with brickkit · 2026-11-05

Before you start

An unofficial fan-made manual

This booklet is not a LEGO product. It was generated from the model file by a computer program and checked part by part.

Not physically build-tested

The model and these steps were checked on a computer only: every part/colour is a real LEGO element, all 4797 connections between parts were matched in 3D, no two parts overlap, every part can be pushed into place in its step, and the model's balance was estimated; the mechanism was swept through its whole range. Not tested: how firmly parts hold, part tolerances and how it copes with handling. Take your time and support the model while you work.

The finished model

About 17.6 × 17.6 cm and 31.8 cm tall, about 1.7 kg (estimated).

A lamp shaped like the Baby Metroid: a hollow Trans-Light Blue dome over a Coral and Dark Red skirt, with three bumpy Trans-Red nuclei floating inside it. The Metroid floats on a clear tube: press it down and the tube clicks the battery box's green on/off button, while the four fangs, linked to a hub held still by the stand's centre axle, snap shut. Rubber belts in the stand lift it back and the fangs open again. Two Power Functions LEDs light the nuclei. The Metroid lifts off its stand.

You will need

- The 2903 pieces in 9 colours listed at the back, with their LEGO element IDs and BrickLink numbers.
- 2x LEGO Power Functions LED lights (8870). Each has two lamps on one lead: one lamp per nucleus, with one lamp to spare.
- 6 AAA batteries for the Power Functions AAA battery box (set 88000, listed in the parts as 64228), which sits inside the stand.
- A brick separator for pieces that sit too deep for a finger.

Tips

- Sort the pieces by colour before you start.
- Build the sections in order: each sub-assembly is finished before it is used.
- New pieces in a step have a yellow outline; earlier pieces are drawn paler.
- Lay the two light leads before the inner membrane (step shown): each plug goes down through the opening in the base, the lamps stay on top.
- Tune the tap with the belts in the stand: add a belt if the Metroid sinks, take one out if the tap feels stiff. It should rest up against the top and move about 4 mm when tapped.
- The battery box turns itself off after 2 hours. To leave the lights on, hold the Metroid down for 3 seconds when you switch on: the box's light blinks and it stays on.
- Power Functions was discontinued in 2018. The LEDs and the battery box are easy to find used on BrickLink.

The 9 colours

- Trans-Light Blue: 1311
- Black: 653
- Trans-Red: 474
- Dark Red: 281
- Coral: 114
- Trans-Clear: 32
- Light Bluish Gray: 15
- White: 12
- Dark Bluish Gray: 8

How to read the steps

Parts and step number

7

2x

The parts for the step and how many of each, then the step number. The parts of a step are drawn at one scale, so a longer one looks longer; a tile or a long plate also has its size in studs under it.

New parts

The parts added in a step have a yellow outline and are drawn in full colour; the parts from earlier steps are drawn paler.

Sub-assemblies

1x

A yellow-framed picture means: put in the sub-assembly you built in its own section. "Build 4x" means you need four of them.

Sections

Each section starts with its name at the top of the page. Sections are built in the order they appear.

Seen from below

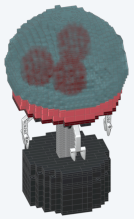
When a step adds parts underneath, the picture shows the model from below. A small label says so (and "seen from behind" likewise). A piece the picture cannot show gets a small picture beside it, ringed in yellow, from the side it can be seen from: where it clicks in.

Insert direction

Some parts slide in sideways (axles through bearings, gears onto axles). The picture shows where they end up; push them in along their axle.

Build overview

The model is built in 11 sections. Each is finished before it is used.



1. Baby Metroid Lamp

BABY METROID LAMP

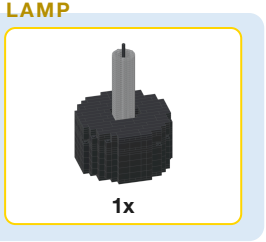
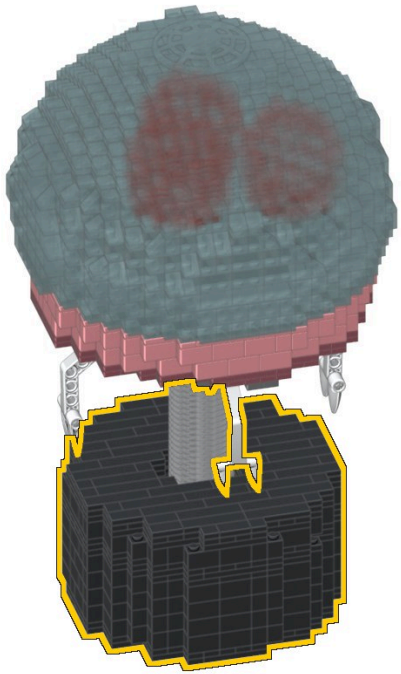
219



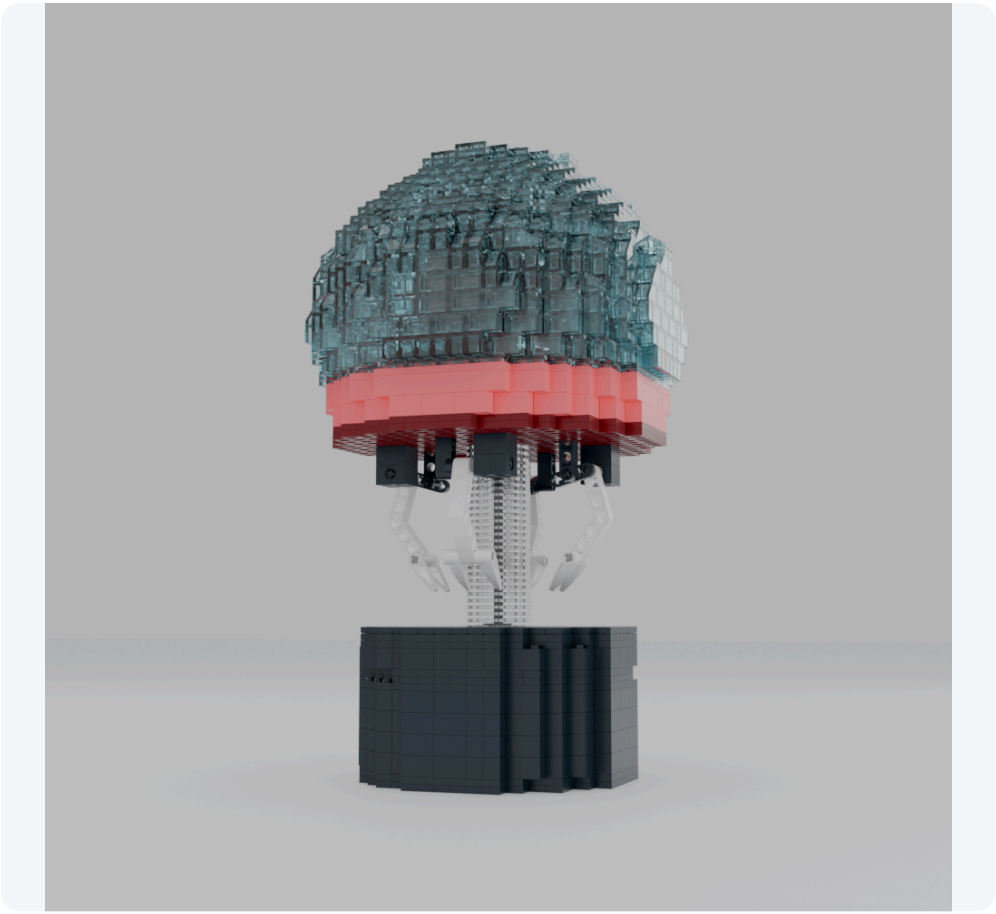
1x

seen from behind

Put the Metroid on its stand

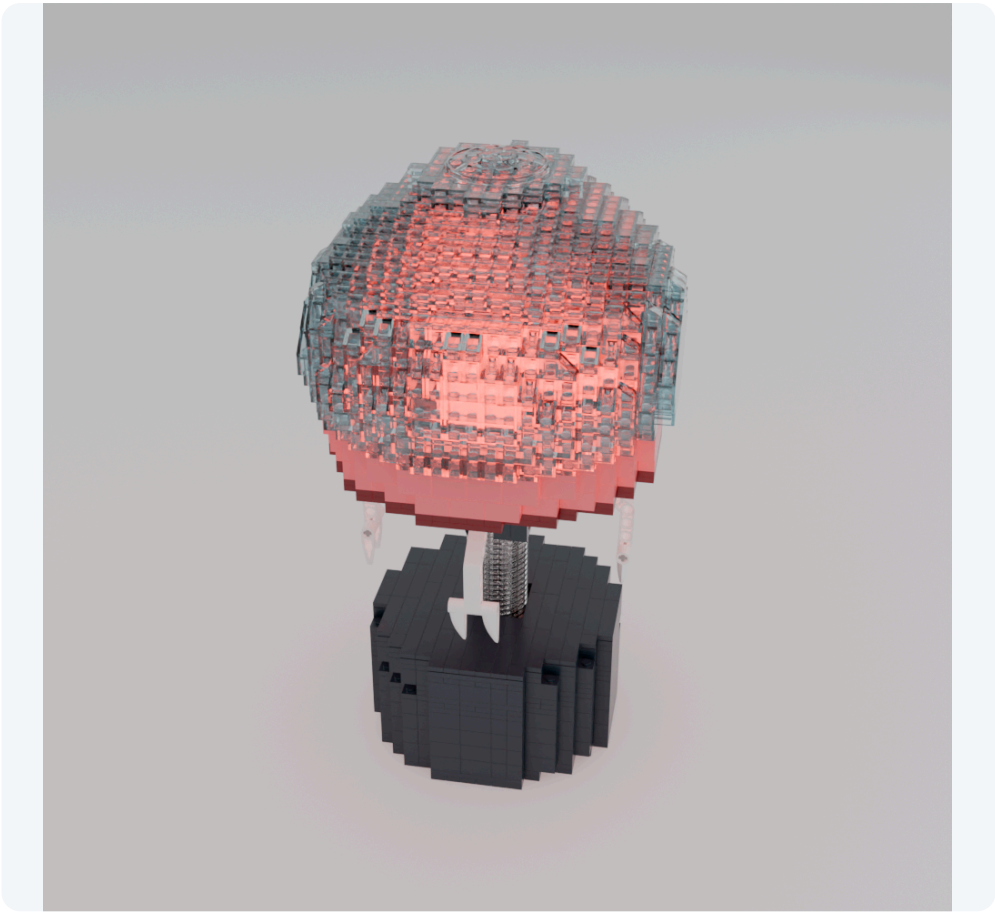


It works!



Tap to bite

Press the Metroid down about 4 mm: the fangs' links meet a hub held still by the stand's axle, so all four fangs snap shut, and the tube underneath clicks the battery box's button. Let go and the belts lift it back up.



A tap lamp

The box's green button is push-on, push-off: one tap and a Power Functions LED under each nucleus lights it from inside; tap again and they go dark. Unplug the leads at the hatch before lifting the Metroid off.

About this model

A lamp shaped like the Baby Metroid: a hollow Trans-Light Blue dome over a Coral and Dark Red skirt, with three bumpy Trans-Red nuclei floating inside it. The Metroid floats on a clear tube: press it down and the tube clicks the battery box's green on/off button, while the four fangs, linked to a hub held still by the stand's centre axle, snap shut. Rubber belts in the stand lift it back and the fangs open again. Two Power Functions LEDs light the nuclei. The Metroid lifts off its stand.

Checked on a computer

WARN	**real elements**	60 part/colour combinations: 0 not real, 1 rare
PASS	**connections**	4797 connections (4665 stud, 80 pin, 52 axle); 1 separate piece(s)
PASS	**collisions**	0 overlapping pair(s) among 2900 parts
PASS	**buildability**	2615 insertions tried across 11 submodel(s); 0 problem(s)
PASS	**stability**	about 1690 g; centre of mass inside the base (104% margin); tips at 19.8 deg
PASS	**mechanism**	24 poses swept for 10 moving group(s); 0 gear pair(s); 0 problem(s)
PASS	**electrics**	3 light(s), 3 cable run(s); longest lead needs 28 of 40 cm; 0 problem(s)
PASS	**technique**	0 note(s)

Not yet built with real bricks

These checks catch most mistakes a designer can make, but not all: clutch power, part tolerances, how stiff a long axle is and how the model survives handling can only be judged with real bricks. If you build it, we would love to hear how it went.

Files

3D model (LDraw, opens in BrickLink Studio, LeoCAD and LDCad), parts lists for BrickLink and LEGO Pick a Brick, and an interactive 3D viewer: **bricks.vhsgarage.com/m/baby_metroid**
